

CoboCoat

Same result every time, with CoboCoat

No matter the automation level in your paintshop, CoboCoat can help with your coating application. An operator should not have to do the coating themselves, only teach the cobot how to do it. With CoboCoat the spray painting operator easily transfers their human skill to the cobot simply by doing the job once and then the cobot mimics them.

-  **Cobot modified for placement in Atex zone 22**
-  **Can be used with any automation spray paint gun**
-  **Programmed by painting the real object**

**NORDBO
ROBOTICS**

"A painting gun isn't heavy on it's own, but working with it for hours every day is tough on your shoulders and back"

-  **Replaces your manual touch up painting**
-  **Follows the conveyor**
-  **Integrate into existing line or use standalone**
-  **2 days for installation and training**

CoboCoat Standard consists of

UR10e modified for Atex Z22,
Mobile platform and fixation
point for one position, Mimic IR
software and programming gun,
Encoder for conveyor tracking,
Photoelectric sensor, Bracket
for spray gun, protective pendant
cover, 2 days of on-site
installation and training
