MultiViz Vibration Analysis For Predictive Maintenance

Features

- Priority List
- Smart Alarms
- Automatic Mode identification

Viking Analytics makes industrial companies win at predictive maintenance with AI. Our core-software, MultiViz, enables industrial specialists to extract insights and value from process and asset data. They can perform data analysis, data annotations, build and deploy AI applications for different assets and processes. MultiViz Vibration enables maintenance professionals and vibration analysts to work with an automatically generated priority list, detect abnormal behaviors, set smart alarms and find out when and which machines to inspect.
