

MOBILE MAINTENANCE WITH INSIGHT MOBILE

MOBILE MAINTENANCE WITH INSIGHT MOBILE

The Insight Control Panel (ICP) - our maintenance portal - provides the ideal technical framework. The ICP's low-code approach ensures the highest level of customisation. In addition, its flexible architecture allows you to access and combine data from multiple systems. Together, these aspects enable the creation of custom applications - either with a web front-end or as a mobile app. Insight Mobile is our approach to mobile maintenance, enabling workers to access real-time data for work orders, assets and inventory from anywhere - improving efficiency and productivity.

Control Panel**

Low code approach **Building simple solutions for complex processes**

Insight Mobile's low-code approach allows it to be customised to YOUR needs - no coding required. Custom processes can be easily mapped and several pre-existing templates provide a great basis for configuration. The responsive design adapts automatically, ensuring the application remains easy and intuitive to use.

CONNECTIVITY

Call your data at a glance

An important aspect of both the ICP and Insight Mobile is the ability to combine data from multiple back ends into one application. With 6 out-of-the-box adapters (IBM Maximo, HxGN EAM, SAP PM...) data can be easily accessed. In addition, data from other systems can be integrated using interfaces based on Data Bae Connector, REST API, Web Service and DMS Adapter.

Grow with Insight Mobile

From small to large businesses - a perfect fit for everyone

Insight Mobile can be used by organizations of all sizes. It is highly scalable and can easily handle large numbers of users - even over 1,500. It also offers multi-language support. RODIAS also offers long-term support for our software solutions, providing our customers with a sustainable solution.

Work where the data is created

Online and offline

Insight Mobile can be used on any device by supporting multiple mobile operating systems (Android, IOS, Windows10). Flexible and efficient online and offline functionality allows you to work from anywhere without fear of data loss.

SECURITY

Your data in good hands

Too ensure that your data is safe, penetration tests for Insight Mobile are done regularly. They are based on the OWASP Top 10 – the 10 biggest web application security risks. Additionally, Insight Mobile uses OpenID Connect, guaranteeing that only the correct end-users get access to the application.
