

ANALYTICS

Trusted Data Across Every Site, Every Shift, Every Module

The Visibility Gap That Leaves Leaders Flying Blind

"We don't have a reliable way to see what happened—until it's too late to fix it."

Without trusted data, teams work from guesses and disconnected reports. The result:

- Field metrics aren't trusted by finance or execs
- Each department builds its own version of performance
- No standard view across vendors, sites, or events
- Dashboards are outdated or incomplete when decisions are made

A global study flagged this as a top challenge: inconsistent data and delayed reporting left leaders with no confidence in labor, spend, or compliance metrics.

AES/32's Analytics Module Brings Order to Chaos

Analytics Module Capabilities

- Aggregates module data (labor, cost, scope, compliance) into unified dashboards
- Supports role-based access and customized views
- Tracks KPIs across time, contractor, and site dimensions
- Flags anomalies in labor, billing, or usage compared to baseline
- Exports structured data for leadership and reporting systems

With AES/32, stakeholders finally share one system of record—from field execution to executive analysis.

What Enterprise Visibility Looks Like with AES/32

Execution Data Captured Live

Labor, scope, and cost data flows from AES/32 modules in real time

Dashboards Segmented by Role

Views tailored for site leads, finance, operations, and executives

Performance Monitored

Track KPIs across shifts, vendors, or time periods

Anomalies and Trends Flagged

Deviations in spend, labor, or usage highlighted for review

Data Exported to Decision Makers

Insights flow into reports, audits, and executive decks

With AES/32 Analytics, everyone sees the same numbers—field-tested, role-specific, and ready to drive the right decisions.

Proof That Alignment Starts With the Right Data

Field research has shown that:

- Low trust in data and manual reporting workarounds were major drivers of leadership misalignment
- Sites lacked real-time analytics across labor, spend, and compliance

AES/32's Analytics module gives teams the shared visibility they need to track value, improve accountability, and report with confidence.

”

“We used to manage by anecdote. Now we manage by data. And it’s data everyone agrees on—from the gate to the boardroom.”

Build More Value by Connecting Analytics with These Modules

Sourcing

Uses catalog pricing as the backbone for vendor quotes

Planning

Connect verified field hours to scope planning and forecasting

Time Management

Validates vendor performance against contracted labor rates

Invoicing

Turn tracked hours into audit-ready billing documentation

Start with Analytics

Analytics gives leadership, operations, and finance a shared source of truth—built from verified field data. It turns siloed reports into real-time visibility across contractors, events, and sites.

Starting with Analytics helps you move from reactive decisions to proactive control—grounded in data everyone can stand behind.
