

MAINTENANCE

From Constant Firefighting to Daily Control

Too many crews. Too little clarity. Too often left holding the bag.

The Hidden Cost of Chasing Labor, Status, and Safety Without Tools That Work

You're accountable for cost, quality, safety, and uptime—but no one gives you the visibility to control them.

Contractors show up late. Certifications slip. Timecards are inflated. When something goes sideways, you're the one answering for it—with nothing to back you up except a spreadsheet and a guess.

Barriers to Control You Can't Keep Solving Manually

- Manual entry leads to overbilling and inconsistent records
- Critical workflows rely on tribal knowledge, not systems
- Each job feels like starting from zero
- Teams burn out verifying the same data every day

What Field Visibility Actually Looks Like

AES/32 gives maintenance teams a real-time operational layer—without slowing down the field.

Track labor and certs live. Flag non-compliance before it becomes a safety risk. Standardize contractor management without overcomplicating it. Get ahead of issues instead of reacting to them.

Field-Proven Modules for Maintenance

 Time Management Real-time hours, trades, certs, and crew presence	 Invoicing Align billing with scoped labor and rate cards	 Scaffolding Surface one of your biggest unmanaged cost drivers	 Analytics Roll up field performance across crews, events, and shifts

What Your Peers Are Saying

"Every time something slipped, I was the one who had to explain it—usually without the data to back it up. With AES/32, I actually see what's happening. And I can prove it."
