

Engicon nv (Geldof) is a leading European supplier of 'integrated steel solutions' for the storage, handling and processing of bulk liquids, solids and gasses. We have a strong reputation in the realization of storage tank projects and pressure vessels, dry bulk storage and handling installations, and diverse, other engineered solutions that often require a combination of wide-ranging technical competencies.

### Storage tanks

Our scope of supply ranges from the delivery of individual storage tanks to the erection of large and fully equipped storage tank terminals, as well as everything in between. Each custom solution is individually conceived and engineered in house in order to optimally meet and exceed the customer's expectations, the specific project challenges as well as all technical requirements. Tanks are designed according to various codes and standards, executed in carbon steel, stainless or duplex materials and built on- or offsite. Over the years, Geldof has grown into a full scope solutions provider for the implementation of turnkey tank terminals, including civil works, tank construction, piping, electrical and instrumentation systems, etc. Geldof offers a single point of contact.

### Pressure vessels

We fabricate a wide range of engineered-to-order vessels for the processing, storage and transport of bulk liquids and gases, such as gas storage bullets and spheres and cargo tanks.

### Maintenance services

We offer project-based and contract-based tank repair and maintenance solutions, ranging from advisory services to all the standard mechanical, civil, electrical and environmental works. We commit to long-term partnerships with our customers.

### On-site constructed terminals

Geldof has a proud track record in the engineering and site erection of storage tanks and over the years has grown into a full scope solutions provider for the implementation of turnkey tank terminals.

### Off-site built tanks

We are fully equipped to build storage tanks up to about 8,000 m<sup>3</sup> off-site, from where they can be shipped for installation at the customer's site.

### Carbon steel, stainless steel and duplex materials

Steel plates and subassemblies are prepared in our fabrication area, which is fully equipped to handle carbon steel, stainless steel, duplex steel and special materials.

### Refrigerated storage tanks

One of our specialty solutions is the realisation of cold, refrigerated and cryogenic gas storage projects, for instance for (green) ammonia as carbon-free energy carrier, both in double and full containment design.

### Gas storage sphere and bullets

We design and fabricate pressure vessels such as gas storage bullets and spheres according to various codes and standards and unique project- and/or customer-based requirements.

### Tank maintenance solutions

We offer project-based and contract-based tank repair and maintenance solutions, ranging from advisory services to all mechanical, civil, electrical and environmental works, all according to EEMUA 159, API653 or other norms and standards.
