

BAKEPACK END OF LINE SOLUTIONS

characteristics

The process does not stop with the production of your end products. Transport is an essential link in the chain from producer to customer. BakePack knows this better than anyone. Based on our expertise in logistics, we can offer you various concepts for preparing your products for shipment quickly and without damage.

With our conveying system, we supply complete handling systems suitable for a wide range of international crate standards. In addition to storage systems for dirty and/or clean crates, each concept is made up of multiple components.

These are crate denesters, nesters, stackers and elevators, crate washing machines and crate loaders.

BakePack can also supply supplementary equipment for fully computerized dolly/trolley handling.

These machines are linked together by heavy-duty conveyors and a computer-controlled operating system.

This ensures that your system operates properly and reliably.

description

Turnkey Solutions

BakePack's most important product is: the correct solution. BakePack mainly owes its good reputation and market position to its flexible attitude and its ability to find solutions for bakeries. The company creates this flexibility because it has its own engineering, production and assembly facilities. Furthermore, thanks to partnerships with other high-quality suppliers, BakePack is able to meet the increasing demand for turnkey end of line solutions from industrial bakeries.
