

GREENLINE FOOD

The ideal organic substrate for perfect growth in fruiting vegetables.

Lensli has succeeded in developing the perfect organic alternative to the traditional cultivation of fruiting vegetables on rock wool: Greenline Food!

Organic substrate

Greenline Food contains only organic materials. This creates optimal conditions for natural soil life, as well as for soil dynamics that you yourself can add, such as trichoderma.

The result:

consistently vital and resistant plants, reduced risk of crazy roots and an excellent intake of nutritional elements due to stable pH levels throughout the entire crop.

The most important characteristics of Greenline Food:

- 75% renewable resources, stemming from the residual flows of other industries
- Initial pH and EC can be adjusted to specific requirements
- Raw materials are RHP-certified, so absolutely safe in use
- Easily disposed of or re-used as 100% organic material.

Greenline Food is delivered in either grow bags or substrate containers as an alternative to traditional rock wool mats.

The use of rock wool blocks is no problem, since the roots will simply grow unchecked into the Greenline Food straight from the rock wool block.
