SYSTEM SOLUTION PARTNER

FLOW BROCHURE

WASYS

ELECTROMAGNETIC

For many years SGM LEKTRA has been active in the field of flow measurement. Electromagnetic flow meters can measure liquids with a minimum electrical conductivity. Electromagnetic flow meters may be employed in all industrial sectors for liquids flow measurement from DN10 to DN2000.

Depending on the type of application SGM LEKTRA has realized 3 types of product lines:

RPmag; RKmag; RPmagM; RLmag: industrial processes

RSmag: food and pharmaceutical

RBmag: battery operated version

All units offer characteristics such as:

Fully bi-directional measure - Extreme reliability - High precision - No moving parts - No pressure losses - Extended measuring range, 100:1 - Measure independent of pressure, temperature, density and viscosity of the liquid.

	RPmag	RKmag	RPmagM	RLmag
Pipe diameter range:	DN10 ÷ DN2000	DN50 ÷ DN150	DN10 ÷ DN250	DN5; DN10; DN15

With this measurement technique it is possible to reach a standard precision of 0.5% accuracy referred to the measured value with the possibility of a 0.2% accuracy.

The calibration of the unit is carried out individually by an internationally certified rig according to the European directives.

The certificate of calibration is an integral part of the instrument supply and has international validity.

The wet calibration rig has an accuracy better than 99.97%.

The calibration rig accuracy is certified and monitored by NIM (National Institute of Metrology) metric institute.

The NIM institute is third party, internationally recognized by BIPM (Bureau International des Poids et Mesures).

The calibration rig complies with the requirements NTC ISO IEC 17025 and the calibration procedures are carried out according to the European EN-45001 Code.

	RSmag		RBmag

RPMAG electromagnetic flowmeter

Flow measurement for conductive and chemically aggressive liquids

Dn from 10 to 2000 mm

Measurement accuracy: $\pm 0.2\%$; $\pm 0.5\%$

Neoprene / PTFE coatings

Power supply 85 \pm 265 Vac; 12Vdc;

24 Vdc / Vac

Datalogger on USB pendrive

Removable O-LED display module

Remote control via Smartphone

RPMAG flowmeter is suitable for all of applications into "industrial process". Various materials for lining are available as well as electrodes made of tantalum, hastelloy c, titanium. Most common communication systems such as Modbus, Hart and by means of an app for Android smartphone via Bluetooth. RPMAG has an integrated data logger for the recording of the measurements over time. It consist in an USB pen drive which is inserted behind the removable O-LED display VL701. The recorded data are stored into a TXT file which is compatible with Excel or other equivalent analisys software packages

TECHNICAL FEATURES

Flow rate range

RPMAG is able to process signals from fluids with flow rates of up to 10m / s in both directions (bidirectional meter).

Range dimension / lining material

PTFE DN10 \pm DN500 / RUBBER DN65 \pm DN2000

Sensor pipe material

SS321

Housing material

epoxy painted aluminium

Electrodes material

SS316L - Hastelloy C - Titanium - Tantalum - Platinum

Measure range

<0,1m³/h \pm >110000m³/h

Accuracy

$\pm 0,5\%$ standard; $\pm 0,2\%$ optional

Repeatability

$\pm 0,1\%$

Fluid conductivity

>5 μ S/cm.

Power supply

85 \pm 265Vac, 24Vac/dc, 12Vdc.

Consumption

6W, max. 8W.

Ambient Temperature Limits

Remote version operating temperature: RUBBER -10 \pm +80°C;
PTFE -40 \pm +150°C

Compact version operating temperature: RUBBER -10 \pm +80°C;
PTFE -40 \pm +100°C

Storage temperature: -40 \pm 85°C

Communication protocol

Modbus; Bluetooth App Android (opt.); Hart (opt.)

Data Logger

Internal data logger to USB pen drive for flow measurements and analog inputs storing; the measurement storage interval can be set from 15 to 3600 seconds

Output

4 \pm 20mA: 0 \pm 500 Ω

Frequency output: 0,1 \pm 10000 Hz

Pulse output: 24Vdc galvanically isolated or open collector galvanically isolated 24V 20mA (opt)

Alarm output: 2 relays, 3A 230Vac N.O.

Input signals

RPMAG has 2 active analog inputs at 24Vdc for 2-wire transmitters connection (eg. Temperature or pressure) and 1 digital input for an external contact connection for the integrated batch function restart and for partial totalizer management.

Reverse Flow

Allows measure and totalization of reverse flow.

Output Testing

Relays output: Transmitter can switch relays at testing value.

Current Source: Transmitter can be commanded to supply a specified test current between 4.0 and 20.0 mA.

Frequency Source: Transmitter can be commanded to supply a specified test frequency between 1 and 10000 Hz.

Low Flow Cutoff

Adjustable. Below selected value, instantaneous flow and outputs are driven to the zero flow rate signal level.

Humidity Limits

0-100% RH to 150 °F (65 °C), not condensing.

Damping

Adjustable between 1 and 99 seconds.

Compact version IP rating

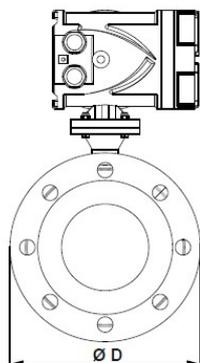

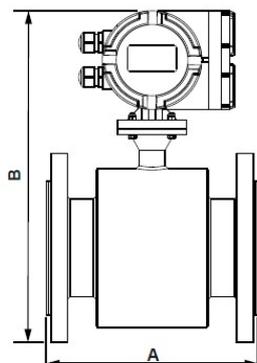

IP67

Remote version IP rating

sensor IP67 / IP68 (by request) - converter IP67

Anti-condensation filter

Anti-condensation filter installed on converter

RKMAG electromagnetic flowmeter

Specific for installations with “0 diameters”
near curves, fittings etc ...

Dn 50 ÷ 150 mm

Accuracy: $\pm 0.5\%$

ABS sensor and lining

Power supply 85 ÷ 265 Vac o 12; 24 Vac/Vdc

Remote control via Smartphone

SGM LEKTRA presents a new type of electromagnetic flowmeter with plastic sensors: RKMAG. Because of its particular inner shape the mounting of the unit requires no straight pipe lengths before and after the meter. The converter is equipped with a large, bright, removable O-LED display and can mount a pen-drive USB data logger. The configurable outputs can be analogic, pulse and MODBUS RTU and alarm messages are managed by 2 configurable relays. RKMAG is suitable for the use with a wide range of conductive liquids, even chemically aggressive: the electrodes material can be selected according to the chemical properties of the fluid.

TECHNICAL FEATURES

Flow rate range

RKMAG is able to process signals from fluids with flow rates of up to 10m / s in both directions (bidirectional meter).

Range dimension / lining material

ABS DN50 ÷ DN150

Sensor material

ABS

Housing material

epoxy painted aluminium

Electrodes material

SS316L - Hastelloy C - Titanium - Tantalum - Platinum

Measure range

<3m³/h ÷ >600m³/h

Accuracy

$\pm 0.5\%$ standard; $\pm 0.2\%$ optional

Repeatability

$\pm 0.1\%$

Fluid conductivity

>5 μ S/cm.

Power supply

85÷265Vac, 24Vac/dc, 12Vdc.

Consumption

6W, max. 8W.

Ambient Temperature Limits

Remote version operating temperature: ABS -20 ÷ +120°C

Compact version operating temperature: ABS -20 ÷ +75°C

Storage temperature: -40÷85°C

Communication protocol

Modbus RTU or Bluetooth App Android (opt.) or Hart (opt.)

Data Logger

Internal data logger to USB pen drive for flow measurements and analog inputs storing;

the measurement storage interval can be set from 15 to 3600 seconds

Output

4÷20mA: 0÷500 Ω

Frequency output: 0,1÷10000 Hz

Pulse output: 24Vdc galvanically isolated or open collector

galvanically isolated 24V 20mA (opt)

Alarm output: 2 relays, 3A 230Vac N.O.

Input signals

RKMAG has 2 active analog inputs at 24Vdc for 2-wire transmitters

connection (eg. Temperature or

pressure) and 1 digital input for an external contact connection for

the integrated batch function restart and for

partial totalizer management.

Reverse Flow

Allows measure and totalization of reverse flow.

Output Testing

Relays output: Transmitter can switch relays at testing value.

Current Source: Transmitter can be commanded to supply a specified test current between 4.0 and 20.0 mA.

Frequency Source: Transmitter can be commanded to supply a specified test frequency between 1 ÷ 10000 Hz.

Low Flow Cutoff

Adjustable. Below selected value, instantaneous flow and outputs are driven to the zero flow rate signal level.

Humidity Limits

0-100% RH to 150 °F (65 °C), not condensing.

Damping

Adjustable between 1 and 99 seconds.

Compact version IP rating

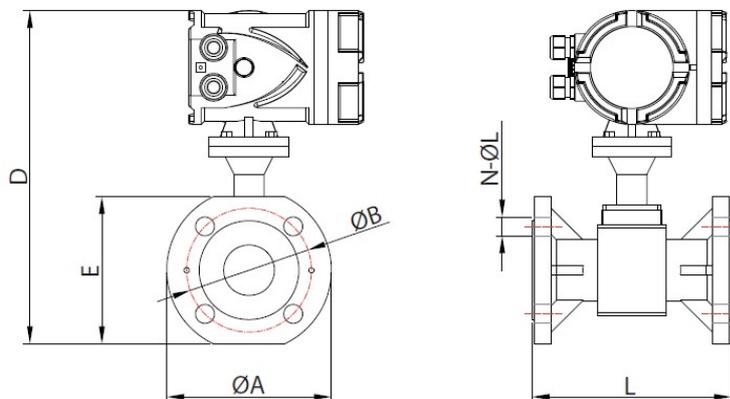

IP67

Remote version IP rating

RPMAGM

MID certified electromagnetic flowmeter

MID certified flow meter

Dn 10 ÷ 250

Accuracy: class II

RUBBER / PTFE lining

Power supply 85 ÷ 265 Vac o 12; 24 Vac/Vdc

Configuration and displaying via VL701with
O-LED display

RPmagM with MID certification is suitable for all industrial processes where fiscal and custody transfer are required. It complies to 2014/32/EU directive and to OIML R 49-1/2/3, EN 14154-1/2/3, ISO 4064-1/2/5 standards. Various materials for lining are available, as well as electrodes made of Hastelloy C, tantalum and titanium. The converter can be supplied with most common communication systems such as MODBUS RTU.

TECHNICAL FEATURES

Flow rate range

RPmag is able to process signals from fluids with flow rates of up to 10m / s in both directions (bidirectional meter).

Range dimension / lining material

RLMAG

electromagnetic flowmeter

Flow rate and temperature measurement

Accuracy $<(\pm 0.8\%$ of the measured value + 0.5% of full scale)

Measuring body totally in AISI 316L

Internal coating in PEEK

Fully configurable measurement, monitoring and dosing functions

Bidirectional measurement

Max pressure 16bar; max. temperature 70 ° C

Threaded process connections

Color display with 90 ° rotation display

Measuring device suitable for measuring values from a minimum of 0.04l / m (DN5) up to a maximum of 100l / m (DN15). The body totally in AISI 316L makes or instrument suitable also for chemical / food applications. The reduced dimensions and the variety of threaded connections allow an easy and quick mechanical installation. Rotating the display of the TFT display allows horizontal or vertical mounting orientation.

TECHNICAL FEATURES

Range of flow

Processing of signals coming from fluids with speeds up to 10m / s in both directions (bidirectional meter)

Process Connection / Internal Dimension

G ½ "/ 5mm

G ¾ "/ 10mm

G 1 "/ 15mm

Internal lining material

PEEK

Sensor body material

AISI 316L

Electrode material

AISI 316L

Measuring range

0.04l / m to 100l / m

Accuracy

$<(\pm 0.8\%$ of the measured value + 0.5% of the full scale)

Repeatability

$\pm 0.2\%$ of full scale

Supply voltage

19 ÷ 30Vdc

Consumption

Max. 200mA

Temperature range

Process temperature: -20 ÷ + 70 ° C

Ambient temperature: -20 ÷ + 60 °

Output signals

max N.2 outgoing connections configurable separately as:
Analogue output 4 ÷ 20mA, or 0 ÷ 20mA with max 500Ω / 0 ÷ 10V

Configurable pulse output

Output frequency max 1000Hz (2000Hz alarm overflow)

PNP alarm output, or configurable NPN; max 30Vdc 200mA

Control input max 30Vdc

Dosing control output for START-STOP-RESEmeasurable

Electrical connection

4-pin M12x1 connector

Reverse flow

Instant measurement and total reverse flow

Flow measurement simulation

Various flow measurement simulation modes are available

Range cutoff

Adjustable. Below the set value the display of the instantaneous flow and the outputs are forced to zero.

Relative humidity

40 ÷ 100% RH at 65 ° C, without condensation

Response time for alarm outputs (integration)

Adjustable between 0 and 6 seconds

Protection

IP67

Rimag Electromagnetic flowmeter

RSMAG electromagnetic flowmeter

- Flow measurement for conductive liquids
- Dn from 25 to 200 mm
- Connections DIN 11851 and CLAMP DIN 32676
- Measurement accuracy: $\pm 0.2\%$; $\pm 0.5\%$
- PFA coatings
- Power supply 85 + 265Vac; 12Vdc; 24Vdc; 24Vac
- Datalogger on USB pendrive
- Removable O-LED display module
- Remote control via Smartphone

RSmag flowmeters are suitable for applications in food and pharmaceutical industries. DIN or Clamp ISO 2852 process connection are suitable for applications with milk, beer or other drinks. Manufactured completely in stainless steel with the option for PFA lining makes RSmag suitable for pharmaceutical application

TECHNICAL FEATURES

Flow rate range

RSmag is able to process signals from fluids with flow rates of up to 10m / s in both directions (bidirectional meter).

Range dimension / lining material

PFA DN25 + DN250

Sensor pipe material

SS304

Housing material

epoxy painted aluminum

Electrodes material

SS316L - Hastelloy C - Titanio - Tantalio

Measure range

Modbus (opt.)

Output

Frequency: 0,1+5000 Hz

Pulse: open collector

Reverse Flow

Allow measure reverse flow.

Output Testing

Frequency Source: Transmitter can be commanded to supply a specified test frequency between 0.1 and 5000 Hz.

Start-up Time

0.5 seconds

Low Flow Cutoff

Adjustable between 0.0 and 9.9%Q_{max}. Below selected value, output is driven to the zero flow rate signal level.

Humidity Limits

0-100% RH to 150 °F (65 °C), not condensing.

Damping

Adjustable between 0.1 and 99 seconds.

Compact version IP rating

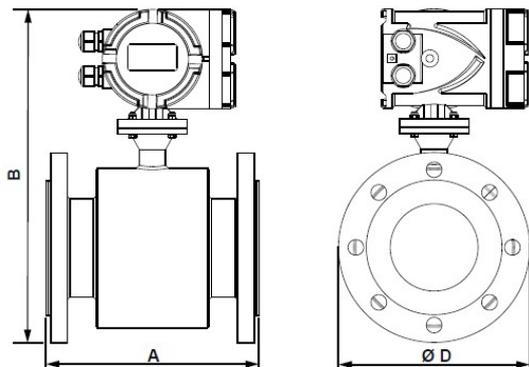

IP67

Remote version IP rating

sensor IP67 / IP68 (by request) - converter IP67

Anti-condensation filter

Anti-condensation filter installed on converter

ULTRASONIC TRANSIT TIME

SGM-101F and 200H meters work according to the time difference principle of ultrasound pulses. The big advantage is in the installation, as it is not necessary to cut the pipe.

The sensors are simply wrapped around the outer surface of the tube, which is why pressure and aggressiveness of the liquid being measured is not a problem for the meter.

The system measures bi-directionally and is suitable for clean or moderately dirty liquids.

	SGM-101F
Pipe diameter range	DN20 - DN4000
Piping material	carbon steel / stainless steel / fiberglass / cast iron / copper / PE / PVC / aluminum

SGM-101F

transit time ultrasonic flowmeter

For conductive and non-conductive liquids

Measure range $<0,2\text{m}^3/\text{h} \div >400000 \text{ m}^3/\text{h}$

Accuracy $\pm 1\%$

Clamp on IP68 sensors also for high temperatures

Pipe dimension range:
DN20 \div DN4000

Datalogger via SD card or via MODBUS

Heat meter

The SGM-101F flowmeters operate on the ultrasonic pulses transit time difference principle. The great advantage is the mechanical installation, because it is not necessary to cut the pipe. The sensors are simply clamped on the outer pipe surface, for this reason the pressure and the liquid aggressiveness to be measured are not a problem for the flowmeter. The system measures in a bidirectional way and is suitable for clean or slightly dirty liquids.

SGM-100T

ultrasonic thickness gauge

Compact digital thickness gauge
Measuring ranges from 1.2mm to 225mm
Suitable for steel, cast iron, PVC, glass etc.
Measurement accuracy: $\pm 0.5\%$
Battery powered

SGM-100T utilizes the transit time principle to obtain a precision measure. Thanks to the high transmission and reception efficiency SGM-100T can also measure on rough surfaces, such as cast iron, and can be used in almost all industrial sectors. SGM-100T can measure many materials thickness, eg.: Steel, cast iron, aluminum, copper, brass, zinc, glass, polyethylene, PVC, etc.. SGM-100T has the automatic switch off (after about 1 inactivity minute) to avoid undesirable energy consumption, so increasing the battery life.

TECHNICAL FEATURES

Display

4 digit backlighted; 48x29mm

Range

1.2÷200mm (Steel max.45mm)

Resolution

0.1mm/0.001inch

Accuracy

$\pm 0.5\%$

Sonic speed

1000 ÷ 9000 m/s

Power supply

battery 4x1.5v AAA (UM-4)

Working temperature

0÷50°C

Humidity

<80%

Dimensions

SGM-300F

doppler ultrasonic flowmeter

Suitable for pipes with diameter from 40 to 4000mm

For dirty liquids with suspended solids or with air bubbles

Flow rate range from 0.05m / s to 12m / s

Relay, impulsive and 4 ÷ 20mA alarm outputs

2.0% calibration accuracy

SGM-300F is an ultrasonic doppler flow meter with wall mounting. SGM-300P is designed to measure the flow rates of liquids inside a totally full pipe. The presence of a certain quantity of air bubbles or solids suspended in the liquid is essential for the correct measurement of the flow rate. The Doppler ultrasonic flowmeter can display the value of the instantaneous flow and the volume totalizer, etc. SGM-300F is equipped with 4 ÷ 20mA output signals for the instantaneous, pulsating flow transmission for transmission of the totalizer volume count and transmission relay

OPEN CHANNEL HYDRAULIC JUMP

The flow measurement in open channels with the hydraulic relief method is carried out with the use, inside the channel or partially filled pipe, of a hydraulic modeller, a probe for measuring the level (in this case ultrasound, without contact with the liquid itself) and an associated control unit for the conversion of the level in the corresponding instantaneous flow.

Thanks to the ever-increasing integration of the systems, a compact ultrasonic probe has been created that incorporates both the measurement of the hydraulic level and the conversion into its instantaneous flow rate.

CA400

complete system for flow measurement

- 2 independent flow measurements
- Measuring range of sensors 1.5; 6 meters
- IP68 sensor protection
- 2 analogue outputs 4 ÷ 20mA
- 5 totally configurable relays
- 2 open collector digital outputs
- 2 analogue inputs 4 ÷ 20mA
- 2 digital inputs (max 24Vdc 10mA)
- Datalogger on USB Pen Drive

The flow measurement in open channels with the hydraulic projection method is carried out with the use, inside the channel or partially filled pipe, of a hydraulic modeller (BS - venturi / PB channels - palmer bowlus), a probe for the Level measurement (in this case ultrasound (PTU50; PTU51, without contact with the liquid itself) and an associated control unit (VLW90M) VLW90M is suitable for a direct connection of 1 or 2 MODBUS ultrasound sensors. Thanks to this feature, the CA400 system is able to simultaneously perform two independent flow measurements with ultrasonic sensors and different hydraulic modellers for each type of channel. Logger "based on removable PenDrive, allows the total traceability of flow measurements in open channels for which it is very easy to analyze the time profile of the instantaneous flow rates.

FLOW51

compact flowmeter

Compact system suitable to be installed upstream from hydraulic modelers (weirs, venturi, palmer bowlus)

Excellent price-performance ratio

Istantaneous and totalized flow measurement

Measure range 0.3÷6m

MODBUS communication protocol

IP68

FLOW51 is a compact IP68 ultrasonic flow transmitter, suitable for the installation in flood-prone wells. The measurement is based on the principle of the raising of the water level before restriction, which is used to calculate the value of instantaneous flow in relation of the type of the existing flume. FLOW51 can be calibrated via MODBUS RTU or VLW601 if used with SGM LEKTRA Venturi flumes, Palmer Bowlus, Parshall flumes, Khafagi Venturi flumes and all the main types of weirs. In case of non-standard flumes the unit can be calibrated by following the linearization table present on the manual or by using a customized flow formula.

PB PALMER BOWLUS

hydraulic modeler

For flow measurement in outflow pipe or no pressurized pipes

Direct installation in the pipe or manhole

Flow rates from 0,45 m³/h to 1800m³/h

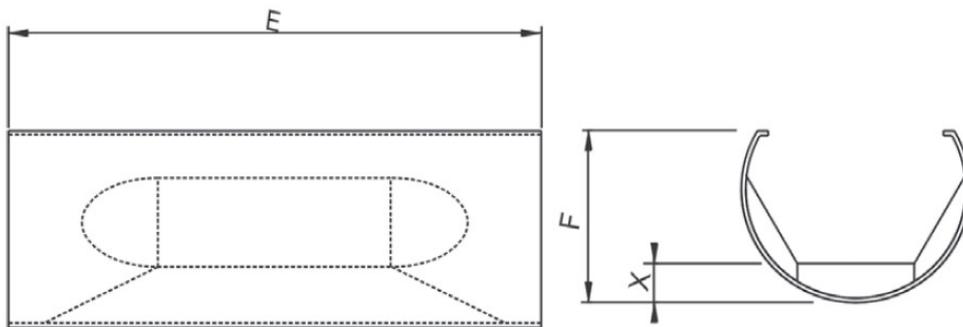

Matching Sets with all SGM-LEKTRA open channels flow measurement systems

Low cost system

Ideal to circular duct flowrate measure

Essentially a hydraulic modeler designed to increase, upstream of the restriction, the fluid head during its outflow. The Palmer-Bowlus upstream fluid head, increases or decreases in function of the fluid quantity flowing over it. The head measured by a level transmitter is then used to calculate the instantaneous flow rate value. The Palmer-Bowlus is mainly used in pipes or ducts accessible through the manholes. The easy installation, and the contained installation cost, are the reason for the applications number increasing of this system to measure the flow rate.

BS VENTURI

hydraulic modeler

Installation in rectangular channels

Flow rates $1 \div >7700 \text{ m}^3/\text{h}$

Low load losses

Matching to all SGM-LEKTRA systems for flow measurement in open channels

SGM-LEKTRA has developed its own flumes family called BS... in co-operation with the Pavia University Hydraulic Division. BS flume is a special Venturi with flat bottom and ready to be lodged in a pre-existing rectangular channel. BS VENTURI are suitable for use in irrigation systems, industrial waste water treatment, sewage, and in general for turbid waters; the flat bottom without protrusions has a self-cleaning effect, does not favor the debris deposit and can be easily inserted in rectangular ducts existing. The submerged flow (ratio from downstream head and upperstream head) can be well tolerated. The practical limit of submergence for all sizes is about 90%.

OPEN CHANNEL AREA VELOCITY

Flowmeter for open-air ducts and open channels with the possibility of satisfying the most varied channel geometries. The system is able to receive the average speed by ultrasonic doppler method and to read the level of the hydraulic head by means of a hydrostatic detector. The system is also applicable in situations of heavy submergence or regurgitation ($Q = \text{average } V \text{ for wet area}$). SGM-600 is installed without the need for hydraulic modelers such as venturi or weir.

	SGM-600F
Pipes diameter range:	Ø 30 + 6000
Channel diameter range:	200 + 6000 mm
Sensor material:	PVC / SS
Electronic housing material:	glass fiber
Process temperature:	-20 + +60° C
Speed sensor accuracy:	±2%
Level sensor accuracy:	±0,25%
Analog output:	4+20 mA
Communication port:	MODBUS
Impulse output:	yes
Supply:	85 + 265 Vac ; 12 + 38 Vdc
Data logger:	SD card

	SGM-600P
Pipes diameter range:	Ø 30 + 6000
Channel diameter range:	200 + 6000 mm
Sensor material:	PVC / SS
Electronic housing material:	ABS
Process temperature:	-20 + +60° C
Speed sensor accuracy:	±2%
Level sensor accuracy:	±0,25%
Analog output:	4+20 mA
Communication port:	MODBUS
Impulse output:	yes
Supply:	lasting rechargeable battery 50 h
Data logger:	SD card

SGM-600F

area velocity flowmeter

- Flow measurements in open channels
- No need for a hydraulic primary
- 4 ÷ 20mA analogue output
- MODBUS RTU communication port
- 16GB SD card datalogger
- Up to 20 points for the configuration of the irregular profile of a channel

The SGM-600F is suitable for flow measurement in partially filled pipes, drainage channels, man-made channels, waterways, drainage ducts, etc. The instrument is composed of a flow calculator, a speed transducer (with a doppler effect) and level. SGM-600F can display speed, level, flow rate and totalizer. It can record flow and total flow data on an SD card up to 16 GB. SGM-600F can calculate the cross-sectional area of partially filled pipes, open channel or river, and up to 20 coordinate points can be entered to describe cross-section of the river or channel with irregular shape. The velocity and level transducer integrates in it the instruments for measuring water speed, depth and temperature. SGM-600F is an indispensable instrument for flow measurement in all those applications where there is no hydraulic projection in the channel or in the pipe.

TECHNICAL FEATURES

Housing material

Glass fiber

Degree of protection

IP66

Keyboard

6 buttons

Display

LCD

Electrical connection

Removable terminal blocks

Working temperature

-20 ÷ + 60 ° C

Supply

85 ÷ 265Vac or 12 ÷ 28Vdc

Analog output (opt.)

n.1 4 ÷ 20mA, with min. load 250ohm and max. 500ohm

Digital communication (opt.)

MODBUS RTU

Datalogger (opt.)

on 16GB SD card

dimensions

244mm x 196mm x 114mm (LxWxH)

Tubes / channels size range

Ø300 ÷ 6000mm / 200 ÷ 6000mm

Speed range

21 to 4500mm / s bidirectional

Speed resolution

1mm / s

Speed accuracy

± 2%

Speed sensor signal path

30 ° above the horizontal

Level range

0 ÷ 3000mm or 0 ÷ 6000mm

Level accuracy

E	Expanding hoop for pipes fm \varnothing 1201 to 1800mm (price on request)

SGM-600P

area velocity flowmeter

- Flow measurements in open channels
- No need for a hydraulic primary
- 4 ÷ 20mA analogue output (opt.)
- MODBUS RTU communication port (opt.)
- 16GB SD card datalogger (opt.)
- Battery autonomy 40h
- Up to 20 points for configuring the irregular profile of a channel

The SGM-600P is suitable for measuring flow in partially filled pipes, drainage channels, man-made channels, waterways, drainage ducts, etc. The instrument is composed of a flow calculator, a speed transducer (with a Doppler effect) and level. SGM-600P can display speed, level, flow rate and totalizer. It can record flow and total flow data on an SD card up to 16 GB. SGM-600P can calculate the cross-sectional area of partially filled pipes, open channel or river, and it is possible to input up to 20 coordinate points to describe cross-section of the river or channel with irregular shape. The velocity and level transducer integrates in it the instruments for measuring water speed, depth and temperature. SGM-600P is an indispensable instrument for flow measurement in all those applications where there is no hydraulic projection in the channel or in the pipe.

SLM2X

total flow indicator

- For 4+20 mA or 0+10V transmitters
- 24VDC power supply for the transmitters
- 6-digit display
- Maximum scale totalizer 999999
- Frontal reset (can be disabled) and remote
- From panel 96x48 mm (depth 100 mm)

SLM2X connected to a flow transmitter (4+20mA or other scale defined in the order), allows the remotely volume totalization. The maximum input range is $\pm 0.1 \dots 40$ mA (default 4+20mA) or $\pm 0.1 \dots 40$ V. The display shows the total flow values in a range from 0 to 999999.

SLM2XH3

total flow indicator

- For 4+20 mA or 0+10V transmitters
- 24VDC power supply for the transmitters
- 2 independent displays for the totalizer (6 digits) and for the flow rate (4 digits)
- Maximum scale totalizer 999999
- Frontal reset (can be disabled) and remote
- From panel 96x48 mm (depth 100 mm)

SLM2XH3 connected to a flow transmitter (4-20mA or other scale defined in the order), allows the remotely volume totalization and the instantaneous flow rate displaying. The SLM2XH3 configuration is via a removable keyboard (optional). The maximum input range is $\pm 0.1 \dots 40$ mA (default 4+20mA) or $\pm 0.1 \dots 40$ V. The display shows the of total flow values in a range from 0 to 999999.

SLM2X Total flow indicator with analog input

Suitable to be connected to analogic transmitters
 4÷20mA or 0÷10Vdc
 4 frontal push-buttons for calibration
 Data stored in EEPROM
 Working temperature: -10° + +50°C
 Front panel mounting (dimA 92x45) IP54

Power supply	
00	115Vac
10	230Vac
20	24Vac
30	24Vdc
Version	
S206	6 digit totalizer display

SLM2XH3 Total/instant. flow rate indicator with analog in.

4÷20mA analog input
 Removable 4 frontal push-buttons for calibration (optional)
 Working temperature: -10° + +50°C
 Front panel mounting (dimA 92x45) IP54
 Accuracy: 0,005% ±1 digit
 Linearization: 0,005% ±1 digit

Power supply	
00	115Vac
10	230Vac
20	24Vac
30	24Vdc
Version	
S206	N.2 Display:, 8 digit totalizer, 4 digits instantaneous flow rate
Accessories	
A	None
P	Removable 4 frontal push-buttons for calibration
