

# Water Permits

Companies are required to have permits for using, storing and discharging waste products to minimize their (negative) impact on surface water quality and aquatic life.

## MISSION & VISION

Complying with Dutch legislation with regard to water usage and wastewater discharge means you can show you operate your business in a safe manner, minimizing your impact on surface water quality or inhibition of wastewater treatment plants. Depending on the type of industry, this can be challenging as regulations can be strict and maintaining good surface water quality is high on the (inter)national agenda. At Bilfinger Tebodin we recognize this.

Our mission is to help the industry manage water use, from sustainable intake and usage to sustainable discharge, complying with Dutch legislation. This makes us a full service provider in the field of industrial waste water, offering the industry a solution to any water challenge. We have 75 years of experience within the water sector and it is our goal to help the industry achieve their goals.

## COMPETENCES

- Working for both the water authorities and the industry, we know what drives both parties
- Complete and future proof strategy for water permits.
- Vast experience in a wide range of (unique) wastewater discharge challenges.
- Integral solutions for water quality and quantity problems in every type of industry.

## PRODUCTS

- Preparing permit applications
- Groundwater and surface water extraction
- All water related substudies including Dutch water quality assessment
- Independent advice on (waste)water quality and quantity issues.

### Michiel van der Meer | Senior consultant Environmental Management

I am an environmental manager with a keen interest in water. Over the years, I've seen an increasing awareness with regard to water usage and wastewater disposal. What drives me is helping clients assess their impact on the environment, make them see the opportunities with regard to sustainable business practices.
