# Palletizer

Plug & Produce

# Palletizer

As there is increasing demand for more efficient palletizing robots, we developed the Palletizer. It is designed to stack boxes and products on two palletizing stations. Users can use our smart software to design their own palletizing project within minutes.

- |                          |                                                 |
|--------------------------|-------------------------------------------------|
| - Robot:                 | UR10e, TM12S TM14S, TM25S, CRX25iA/L, CRX20iA/L |
| - Weight:                | + - 200 kg                                      |
| - Max. Payload:          | 25 kg                                           |
| - Max. boxes per minute: | 3 to 4                                          |
| - Max. stack height:     | 3 meter                                         |
| - Dimension ex. cobot:   | 966 X 1450 X 845 mm                             |
| - Power requirement:     | 100-240 VAC                                     |
| - Payback period:        | <9 maanden                                      |
| - Multi-pick:            | ✓                                               |
| - Slip sheet:            | ✓                                               |
| - Automatic sorting:     | ✓                                               |
| - Layout optimization:   | ✓                                               |

Optionally available with range extenders & safety.
