Manufacturing data capture

Digitalise continuous improvement strategies

In the era of digitalisation, companies are increasingly seeking more data and performance metrics to drive productivity and ensure compliance. However, no enterprise systems cover the full breadth of data requirements and they are not able to keep up with the pace of change of business. As a result, most organisations rely on spreadsheets to fill the gaps – they may be flexible and rapid to create, but they are manual, fragmented and lack data integrity – this is not scalable and can put your business at risk if key personnel leave.

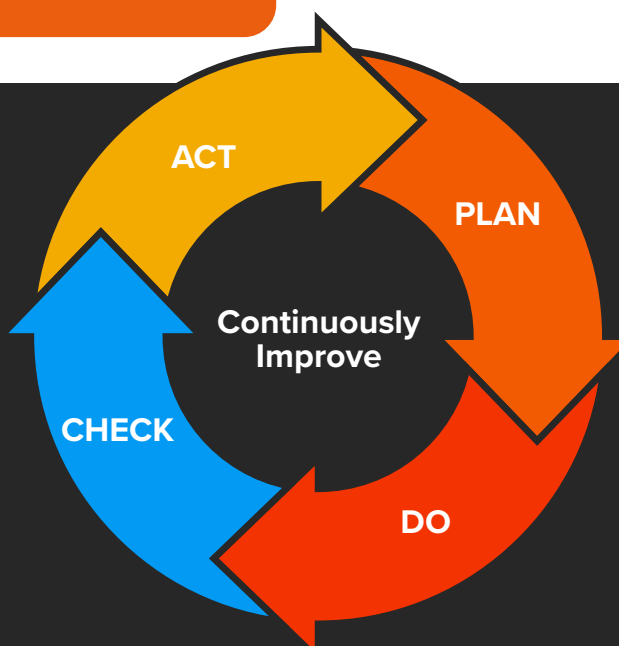

Paperless retains the flexibility of spreadsheets, but allows for standardised issue capture, and comprehensive analysis of information. Designed for manufacturing, Paperless is configurable to issue capture, mobile auditing management, and surveys. All of this enables organisations to consolidate and digitalise their end-to-end issue capture, resolution and reporting process.

Paperless underpins industry 4.0 strategies to capture information from people and processes throughout your factory, replacing fragmented spreadsheets. Standardising templates with robust version control, Paperless ensures data integrity and streamlines information capture. A cloud-based platform, it's available offline and on mobile devices, integrating with all Fitfactory products, including MRP, ERP and MES systems, to tie together disparate systems and departments.

48%
reduction in time to capture issues

"By implementing the issue capture tool, we can demonstrate we are reducing times to capture and identify problems up to 48%"

- Bentley Motors

Identify root causes to alter processes and mitigate risk.

Update templates to new versions, and ensure traceability.

Streamline improvement ideas by assigning corrective actions directly from the app.

Maintain performance levels by analysing results.

Create standard templates to capture structured information across multiple teams, departments & sites.

Establish SMART goals, and set-up KPIs to track performance.

Empower your team to capture issues on the shop-floor with mobile & offline versions.

Utilise cross-functional teams throughout your business to capture detailed information.

Capture the information that your ERP can't

Internal & external auditing

Schedule audits & streamline corrective action management. Engage your workforce with digital auditing & compliance tools. Mobile standardised capture forms can be taken on the shop floor to capture issues and assign corrective actions to resolve issues efficiently. Monitor KPIs and track performance in real-time.

Questionnaires, surveys & diagnostics

Streamline feedback capture from employees, customers & suppliers through digital questionnaires, diagnostics and surveys. Easily create standardised questionnaires, & distribute them to partners to capture information with complete traceability. Generate intelligence through advanced reporting dashboards.

Robust data capture

Create and share structured questionnaires throughout your business to standardise information capture and ensure data integrity. Utilise the comprehensive range of question types to capture everything you need, when you need it.

Full traceability

Effortlessly retain full audit trail of who did what, when, in your company. Ensure data capture is standardised across disparate teams with, and different sites with automated version control.

Industry best practice template library

The Paperless template library embeds industry best practices into downloadable templates for use in the app. Including forms such as ISO9001, machine maintenance and customer feedback, iQapture can be applied throughout your business.

Automated schedules

Set up recurring schedules & assign managers to complete audits at regular intervals. Capture information effectively across multiple departments and factories. Receive dashboard notifications and alerts when tasks are due, and escalate risks when projects are at risk.

Mobile & offline data capture

Paperless allows you to capture information from shopfloor to out in the field, even when you're offline. Forms sync as soon as they're connected to the internet, ensuring you get the right data to the right people at the right time.

Corrective action management

Identify issues throughout the shopfloor and assign corrective actions directly from the app to ensure issues are logged, and resolved efficiently. Monitor performance over-time to view how quickly issues were resolved.
