

C240 VENDING MACHINE

» A HIGHER LEVEL OF CONTROL

The C240 Collector is an auxiliary OEM unit that works with vending machines equipped with a MASTER user panel. It can handle any type of product with a total capacity of up to 240 litres. Its intuitive management is provided through the user panel installed in the main machine. The control of the C240 Collector is possible only from a MASTER machine.

The vending machine is equipped with a video system based on an internal camera. This enables the returned products to be recorded with accuracy and their functioning is independent. Inside the C240 Collector Machine, there is a container that allows for a fast, easy, and ergonomic collection of used products.

The C240 drop box, by offering the option to collect used products, materials, or items for restoration, promotes environmental preservation and conservation.

The automatic flap opening built into the Collector allows for intuitive use. This makes performing a return and familiarity with that moment user-friendly. The C240 drop box has a 'Return product to collect a new one' option, which provides 100 percent control over dispensing and returns. The machine will not dispense a product if the previous one is not returned.

Each MASTER machine allows you to connect up to 14 vending machines.

Available in OEM version
