

### **New Gericke Continuous Mixer GCM 800 ECB and 1200 ECB**

Highest mixing homogeneity and the hygienic design characterize the continuous mixers GCM made by Gericke. The series has now been further improved by the models type GCM ECB.

With the latest design it is possible to extract the drive and the mixer housing for easy access. The mixer has 3 operation positions:

- 1 Mixing position
- 2 Cleaning positions

The GCM 800 ECB and 1200 ECB are equipped with a cantilevered shaft and a shaft seal which can be dismantled completely in a very simple way. In this hygienic version, the parts in contact with the product are polished.

The mixer has no hollow bodies where residue can build up.

The experiences made with the mixers during the operation have been incorporated in the design of this latest model. For the user it means a remarkable improvement in regard of accessibility to all components and excellent cleanability of the mixer.

The GCM mixer is suitable for the operation in ATEX zones.

Optionally the mixer can be delivered with heating/cooling jacket, different weir plates for the adjustment of the residence time and a pneumatic batch process unit. The new generation GCM ECB sets a new benchmark for continuous mixing.
