

FMB 2022

12 – 14 October 2022 | Messezentrum Bad Salzuflen

PRESS BRIEFING

PI04_2022 FMB

Bad Salzuflen, 08.07.2022

[A look ahead to the FMB – the supplier show for mechanical engineering 2022](#)

Supplier show to provide ideas for promoting automation

Even if managers in the field of mechanical engineering are facing constraints caused by other issues such as delivery problems and power supply, automation and digitalisation are and will remain key tasks. When it comes to automation – in keeping with Industry 4.0 – companies frequently need to concern themselves with small-series production or the assembly of products with many variants.

The FMB – the supplier show for mechanical engineering (which will be held earlier than usual in this year, namely from 12 to 14 October 2022) will provide the decision-makers in the manufacturing industry with an overview of the trends in the field of automation, and in doing so, will showcase the entire spectrum of this key technology.

The core areas of expertise of the exhibitors will, of course, cover robotics as the supreme discipline of automation. Highly proficient automation system integrators including Hahn Robotics, JDT Robotics and Noll Sondermaschinenbau will be demonstrating how robot-assisted automation can also be implemented in SMEs and how it is in fact especially suited to these particular companies. Well-known manufacturers of robotics peripherals and grippers, IPR and Onrobot, will also be participating in the FMB.

Those on the lookout for turnkey systems for automated assembly will find the right contacts among companies offering customised engineering solutions such as Bisontec and Taktomat. Components and modules for such systems will be showcased at the stands of enterprises including Conway, Harmonic Drive, Hiwin, igus, Keba Industrial Automation, Robotunits, RK Rose + Krieger and SMC. And, it also goes without saying that the control technology field of automation will be well represented at the FMB – with global players such as Beckhoff, Wago and Weidmüller as well as numerous highly specialised suppliers.

A multitude of stimulating ideas will also be on display at the joint stand of the Leading-edge Cluster "it's OWL", at which Smart Factory OWL will be one of the exhibitors – as a living lab for Industry 4.0. Visitors to this booth will obtain practical ideas and suggestions for automated small-series production and even for unique pieces.

The overview demonstrates: Visitors on the lookout for stimulating ideas for automation in their companies will be kept busy at the FMB – particularly in view of the fact that highly skilled exhibitors will also be on site addressing the issue on the software side and do not merely aspire to automation in production but also for all related business processes such as purchasing, production planning, order processing and resources management. For companies seeking to automate their processes, it is worthwhile paying a visit to the stands of these exhibitors – including EVO Informationssysteme, Open Mind and Sage.

The 17th FMB – the supplier show for mechanical engineering will be held at Bad Salzuflen Exhibition Centre from 12 to 14 October 2022.
