

A-SAFE

Dock Buffer

The A-SAFE Dock Buffer protects essential loading dock bays from recurring impact damage caused by reversing heavy goods vehicles. Multiple fixing points allow for easy installation to existing dock bay fixing infrastructure, while the durable multi-layered polymer construction minimises the need for maintenance. The Dock Buffer features a high-visibility yellow stripe for enhanced driver guidance.

Engineered for performance

A-SAFE products have been engineered to provide the ultimate in performance and resilience. Every component has been designed, manufactured and rigorously tested at our state-of-the-art UK innovation centre, to ensure the highest quality and safety standards.

Reduced Repair Costs
Robust polymer construction absorbs the forces from repeat heavy goods vehicle impacts, preventing damage and reducing maintenance costs to loading bays and vehicles.

Ultra-low maintenance
Polymer material is chemical and water resistant, non-corroding, non-scratch and self-coloured, eliminating the need for painting.

Resilient design
The ergonomic rounded-edge design enhances durability, while the fully integrated construction means there are no parts to go wrong.

Enhanced visibility
An integrated high-visibility layer provides enhanced visual guidance to drivers.

Vehicle compatibility
The Dock Buffer is compatible with all goods vehicle and trailer types.

Recessed fixing locations
prevent contact with vehicles, ensuring the cushioning effect is unhindered
