

LIANOL: THE NATURAL START!

FERTI IS PART OF THE LIANOL 5 STEP PIG CONCEPT

1	2	3	4	5
FERTILITY sow	FARROWING sow	BIRTH piglet	FARROWING PEN piglet	WEANING piglet
Higher farrowing rate and more uniform piglets	Smooth birth of vital, heavier piglets	More energy and extra immunity right after birth	Good gut development and digestion from day one	Healthy gut around weaning

Lianol 5 step Pig Concept is an innovative feed approach from Ardol.

FERTILITY

HIGHER FARROWING
RATE AND MORE
UNIFORM PIGLETS

IN HEAT SOONER; MORE UNIFORM AND MORE PIGLETS

Successful insemination depends on the condition of the sow.

Successful insemination and gestation depend on the condition of the sow, the moment of insemination, and the quality of sperm and egg.

Many sows suffer from an energy deficit at the end of lactation. This causes them to visibly lose weight and it disrupts the metabolism. Good metabolism is important for the development of healthy ova, smooth ovulation and more, viable embryos.

Lianol ferti affects the sow's IGF-1* level, which stimulates the complex fertility process in a natural way. It also boosts metabolism, allowing sows to recover more quickly. This has a positive impact on the hormonal balance of the sow and contributes to the process of ova maturation. They will ovulate sooner, so the sow will come into heat sooner.

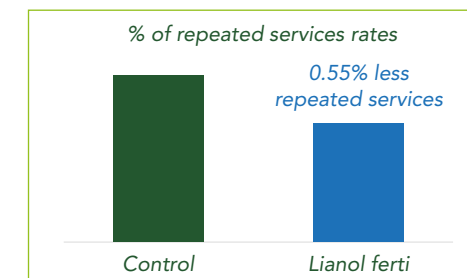

Lianol ferti results in:

- sooner and more visibly in heat
- higher farrowing rate
- more uniform litters
- less adverse effects of heat stress
- less impact of seasonal influences

* IGF-1 is Insulin-like Growth Factor 1, a growth stimulator naturally produced by the body.

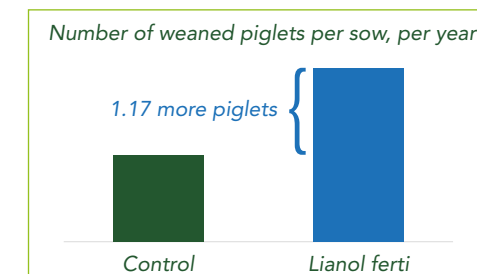

LIANOL FERTI; THE BASIS FOR A HIGHER FARROWING RATE

Fewer repeated services

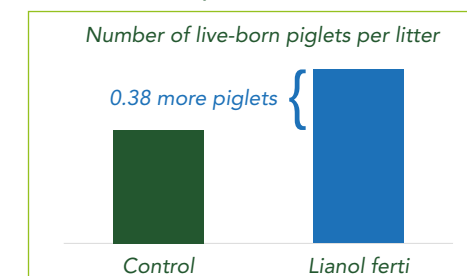

Measured variable 235,000 sows

More weaned piglets

Measured variable 235,000 sows

More live-born piglets

Measured variable 235,000 sows

USE OF LIANOL FERTI

Lianol ferti is available as a bolus.

Use:

- **Gilts:** administer for five days after synchronization treatment
- **Second-litter sows:** from three days before to three days after weaning
- **Older sows:** from two days before to two days after weaning
