

ShellFoss

IMPROVES EGGSHELL STABILITY

VILOFOSS®

ShellFoss

Improves eggshell stability

WHY CHOOSE SHELLFOSS?

In aging hens, especially nearing the end of their laying cycle, there is a notable increase in the proportion of declassified eggs. This occurrence can significantly impact the overall profitability of the flock. By supplementing ShellFoss into the hens' diet, you can mitigate the issue of declassified eggs, ultimately safeguarding and maximizing your flock's profitability and maintaining eggshell quality throughout their production cycle.

„Don't let age hinder your hens' performance - empower them with ShellFoss for outstanding eggshell stability!“

THE STORY BEHIND SHELLFOSS

ShellFoss is a premix fine-tuned for supporting eggshell quality and productivity of layer hens, especially during their later stages of production. It is enriched with essential nutrients, including a carefully balanced mix of vitamins and organic trace elements accompanied by a uniquely refined plant extract.

CONVINCES WITH CLEAR ADVANTAGES

Profitability of egg production depends on various criteria. Relevant functions for this are supported by ShellFoss:

- Enhanced elasticity of the shell structure
- Increases eggshell thickness
- More intense shell color (brown egg layers)
- Reduced occurrence of declassified eggs
- Yields more marketable eggs
- Improved persistency of the flock

HOW TO USE SHELLFOSS?

Handling of ShellFoss is very simple. The premix is used "on top" with just 1 kg per metric ton of feed. For a robust and immediate support of your flock, it is highly recommended to utilize 2 kg of ShellFoss per metric ton of feed during the initial days of administration.

PACKAGING

ShellFoss is conveniently delivered in sturdy and practical 25 kg bags.

Product No. 68700 / 68701
