

Whether it's a tried and tested solution or a new project approach: with a deep understanding of your challenges and the right idea, nothing is impossible. That's why we cover a wide range of services and have cross-industry expertise. 40 years of experience have made us what we are today: a trendsetter in the development and implementation of automation systems and industrial robots.

What robotics can be

## GRAPHICS-BASED ROBOT PROGRAMMING

### AT THE CUTTING EDGE WITH ROBOT AND CONTROLLER NEUTRALITY

Advances in technology have made highly complex concepts, among them automation through the use of robots, accessible to a wider public. According to the globally recognised World Robotics Report, the most important trends in this area are the simple integration and programming of the system components used for this purpose. As a technology company and automation specialist, we see this challenge as a key opportunity to make automation as easily available as possible. In concrete terms, this means developing a plug-and-play standard automation system using icon-based robot programming to create platform-independent software. One for all!

### WHAT ROBOTICS CAN BE: ONE LANGUAGE FOR THE WHOLE WORLD OF AUTOMATION

WHITEPAPER

**Simple**  
operation and programming

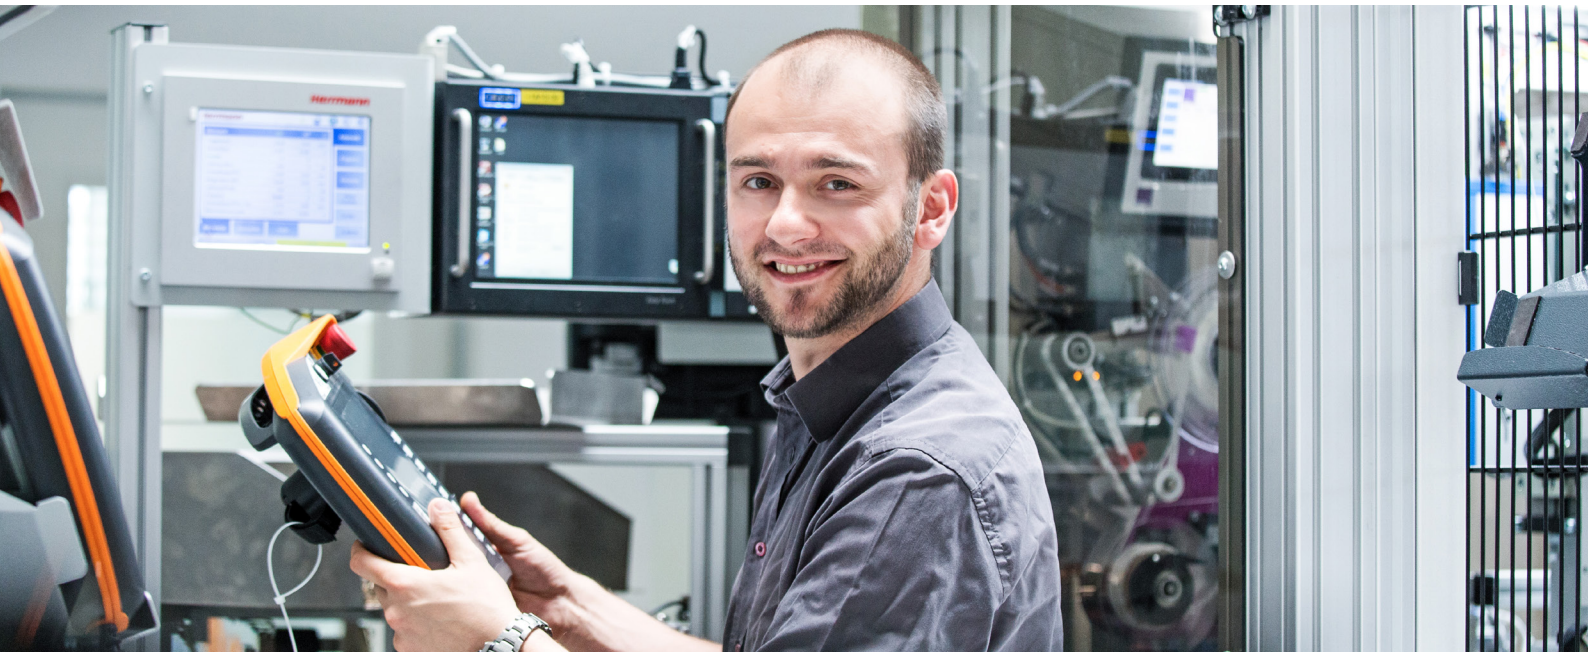

**Smart**  
controller components

**Modular**  
software modules

## YOUR BENEFITS AT A GLANCE

### / Flexibility and modularity

thanks to standardised hardware and software interfaces

### / Easy extension of the programme modules

when requirements change

### / Maximum operating and programming convenience

thanks to central data management and icon-based robot programming

### / Flexible applicability

on individual robot types as well as entire production systems

### / Offline and online software

enables parallel sequence programming, commissioning and 'on-the-fly' adjustments

### / Everything from a single source

development, software and customer support
