

fpt FlexOP

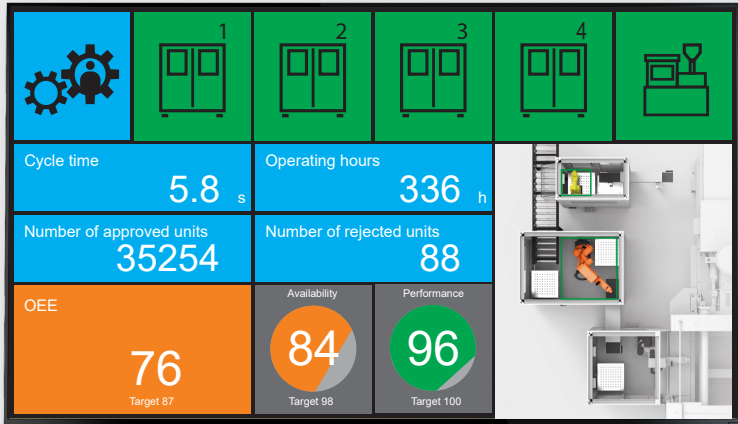

Flexible Operating and Programming of Industrial Components

The **fpt FlexOP platform** gives you a revolutionary ease of communication with industrial components. The solution ranges from the smallest unit in your production to automation systems with a variety of peripherals to the entire production environment. What's special about this is that with an icon-based user interface and intuitive touch functions, the integrated systems can be operated, parameterised and programmed very easily. The monitoring, control and optimisation of production processes is all possible in one central location, just a click away.

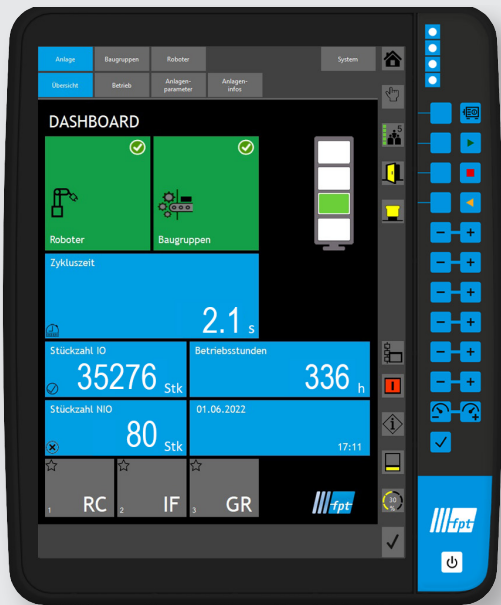

FlexOP Production Control
Digitalisation, automation and networking of the entire production.

FlexOP Cell Control
Control, monitoring and optimisation of a production unit.

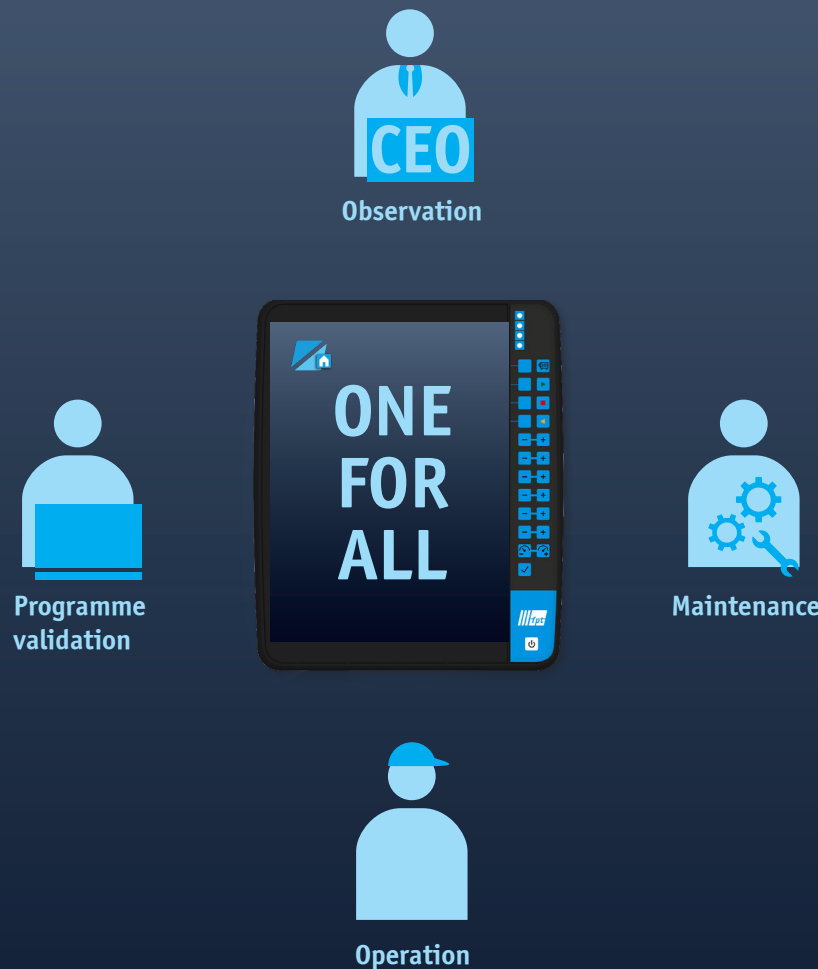

FlexOP Robot
Operation and programming for robots.

What robotics can be

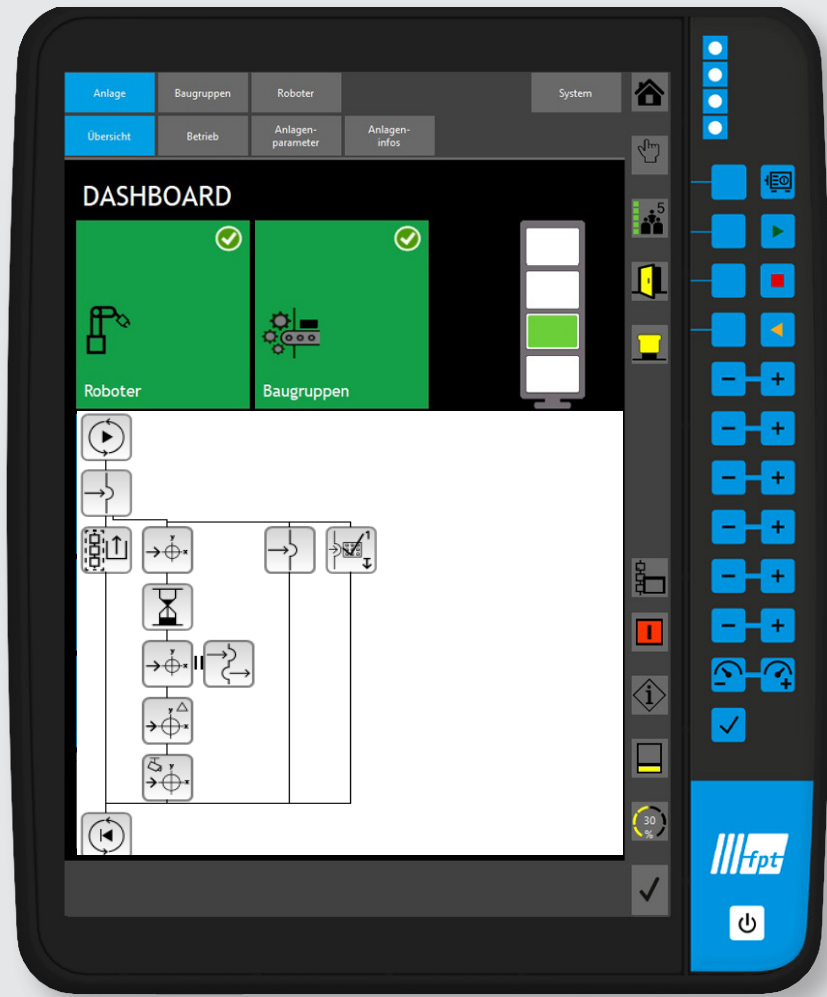

fpt FlexOperations

The integrated system
for future-proof production

FlexOP Robot

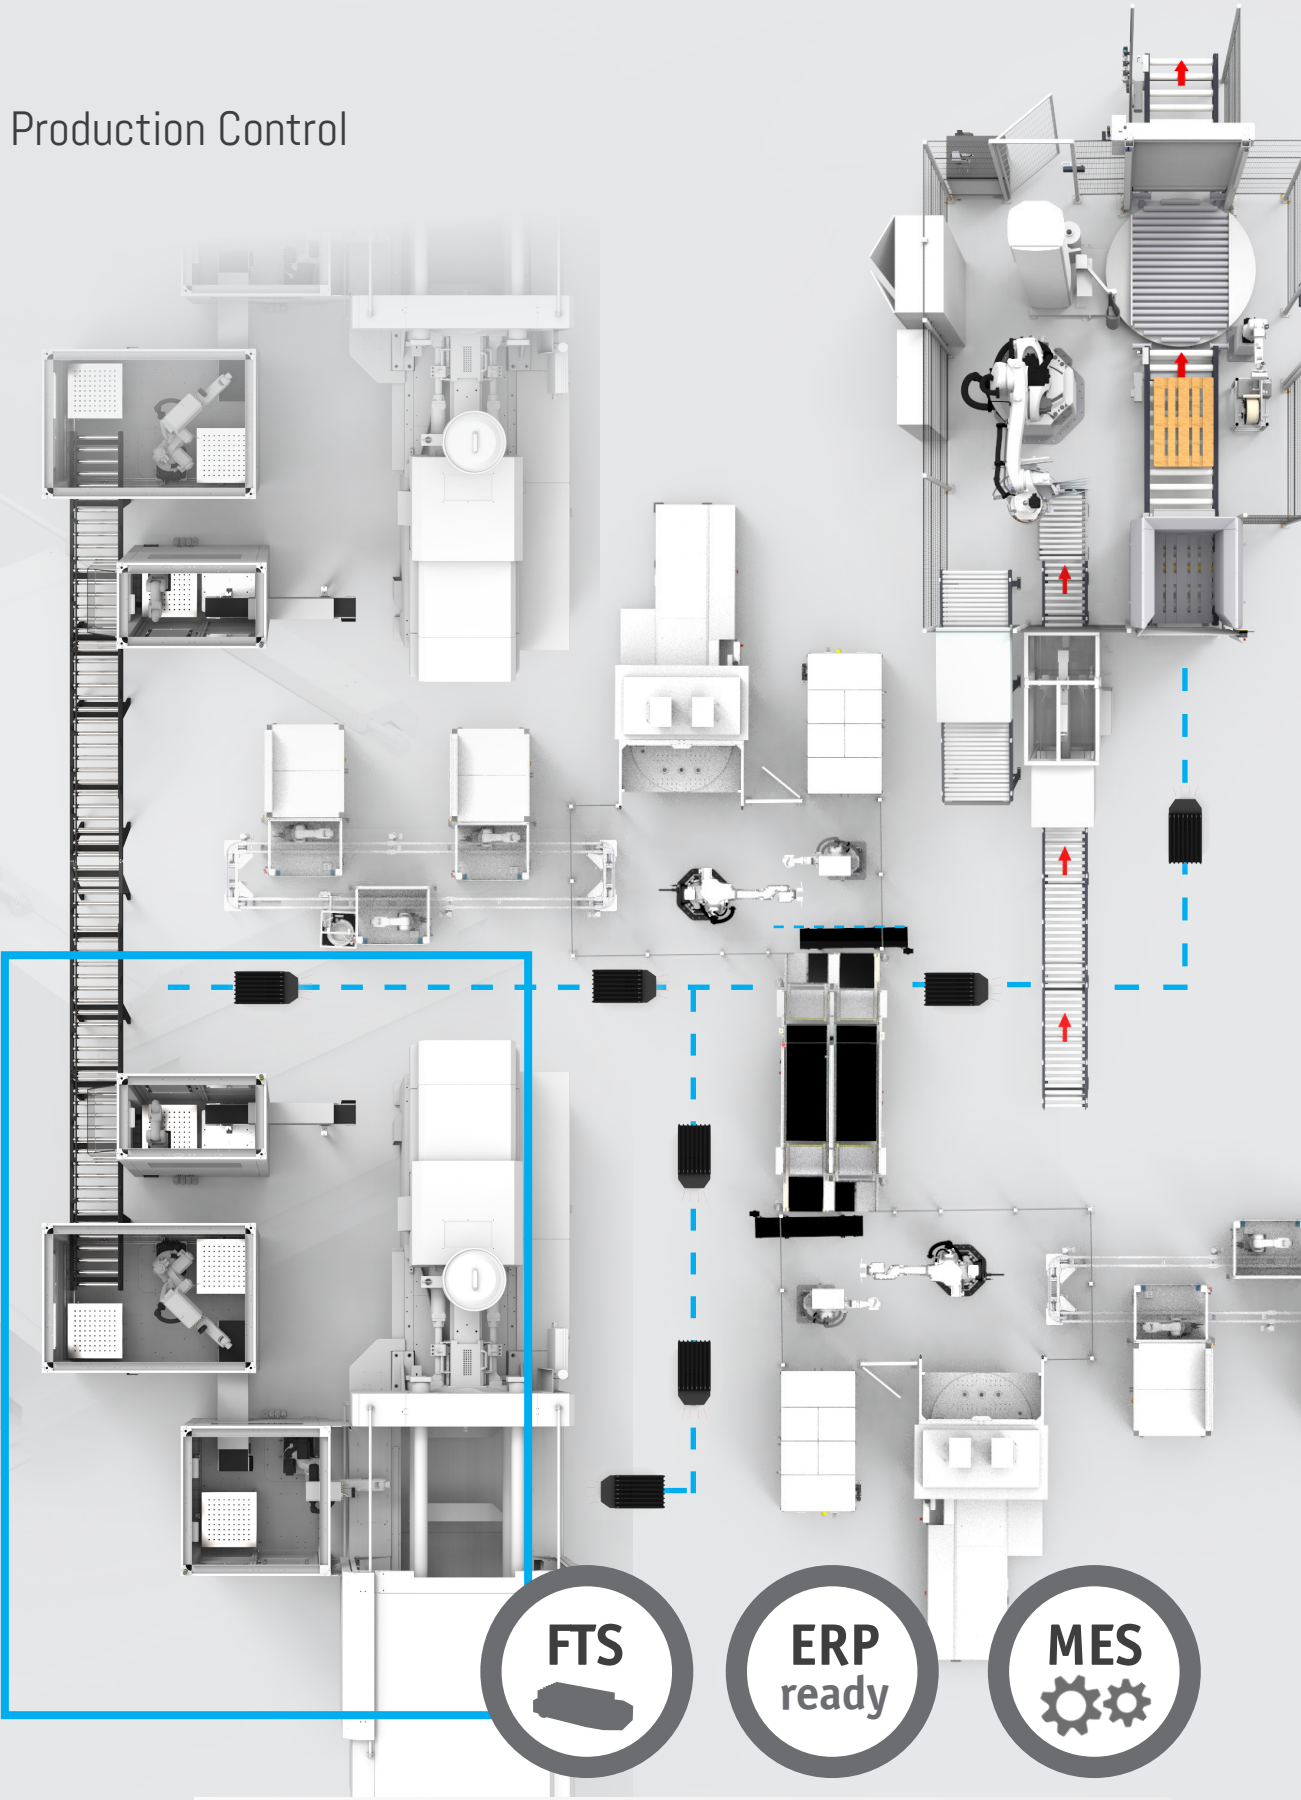

With universal program blocks, you can quickly and easily operate and program the required workflows of the robot that is perfectly tailored to your needs.

FlexOP Cell Control

Using peripheral components, robot cells can be individually supplemented to an existing production line while being centrally controlled and visualised. Agile, efficient and intelligent!

FlexOP Production Control

An integrated communication architecture captures and visualises all required production data in real time and centralises control over the entire production – including the integration of third-party systems.
