

COMPLEX PROCESSES MADE EASY

CONFIGON SUPPORTS YOU ...

Our product configurator CONFIGON is a software solution for configuring complex products in 2D and 3D. Our configurator offers you more than just CPQ software, with which you configure individual products (C), calculate their prices (P) and directly create a quotation (Q). As a cross-process configurator it speeds up and optimises many processes: from configuration to quotation to production.

speed up quoting, manufacturing and planning processes.

The quotation lead time is reduced & manufacturing data is created.

maximising your turnover through targeted cross selling.

CONFIGON suggests suitable accessories and products (guided selling).

minimise the return and error rate. Thanks to assistants, rules and plausibility checks.

in effectively distributing variant-rich portfolios. CONFIGON has the whole product knowledge at its fingertips – no matter how complex.

open up new sales channels. CONFIGON is not only suitable for your sales team, but also as a self-service tool for your customers.

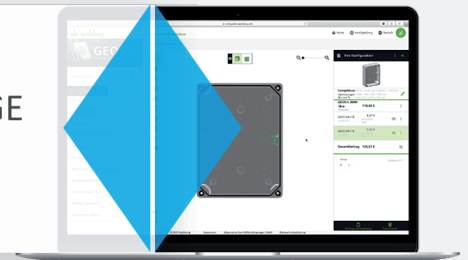

in identifying trends and correlations. Which product is particularly in demand? Control sales and marketing in a more targeted way.

CONFIGON

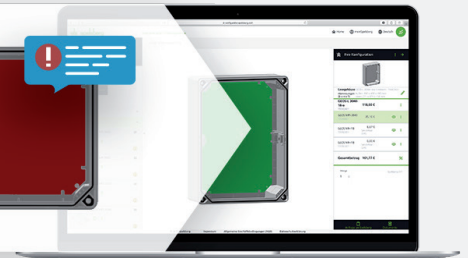

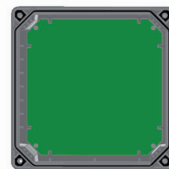

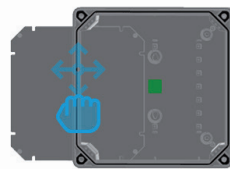

KEY FEATURES IN ACTION

Seamless integration
into existing system
environments

ERP ... CRM ELBRIDGE
PIM e-commerce
CMS

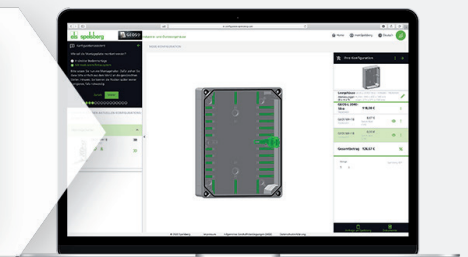

Error-free configuration
via drag & drop thanks
to plausibility and
collision check

Modify products rule-
based in 3D or 2D

Intuitive to use thanks
to a wide range of
assistants

Process optimisation

CONFIGON guides your products from configuration to quotation straight through to production. Due to the seamless integration into your system environment, the completed configuration is automatically converted into a quotation and ordered. At the same time, all production-relevant data can be generated. Detailed documentation is generated for the user, including complete price- /parts lists, dimensionally binding CAD data in 2D or 3D and assembly plans.

Seamless integration

CONFIGON integrates seamlessly into existing system environments so that redundant information and additional work are avoided. Whether PIM, ERP, CRM, CMS, cadenas etc. – CONFIGON draws on existing knowledge and uses it to your advantage.

2D / 3D Configuration

Visualisations simplify the understanding of the product and enhance the attachment to the product. Let your product be designed in 2D as well as in 3D. Depending on which configuration step or which goal the user is following, the optimal perspective is automatically selected. This way, the user always gets an overview of the product, which simplifies the editing of the products. The highlight: CONFIGON can take light, shadows and disturbing elements (e.g. sloping roofs) into account during configuration.

User guidance

CONFIGON is intuitive to use. Right from the start, the user is supported by wizards, pre-configured products and suggestions for suitable accessories (guided selling). The configuration is simplified and sped up. Products can be configured individually and device-independently via drag & drop. If help is needed even with assistants and quick fixes, your support team can log into the configuration.

Configuration assistant

Our configuration assistant is an innovative tool on the market that makes configuration easier for the user. The assistant can be maintained by you independently. For example, you can make suggestions for the placement of mounting plates: modular installation system or direct floor mounting? Of course, only suitable articles are suggested in each configuration step.

Independent data maintenance

With CONFIGON you have the possibility to maintain articles and rules independently - without programming knowledge. For this purpose, mature data maintenance tools are available to you.

Rule engine

With CONFIGON you can maintain your rules easily, independently and without programming work. All the necessary restrictions and options for your products are defined using the "if-then" principle. Your customer does not have to be a product expert, because that is CONFIGON.

Plausibility check | collision check

Our plausibility check uses the rule-engine and ensures error-free configurations. If collisions occur, important information is provided to the user: Where does the problem occur and how can the problem be solved?

Customising

With CONFIGON you can not only design products individually, but also adapt them dynamically. For example, you can place drill holes in accordance with the rules, change the length of mounting rails and set cut-outs. The modification options for your products are subject to your set of rules. Minimum distances, DIN norms of the products, workable surfaces and similar are taken into account.

Available everywhere at any time

CONFIGON is available installation-free in the browser – 24 hours, 7 days a week. Thanks to regular synchronisations, it is also available offline. The result: Both beginners and professionals can flexibly configure and order their desired product, regardless of location and device. Even country-specific portfolios and international units of measurement (e.g. price, length) are integrated as standard.

Cross selling

CONFIGON actively suggests suitable articles and accessories during configuration: Mounting plates / holders, covers, doors, partitions, etc. The user can place the accessories directly by drag & drop. If no 3D model is available, the item can be added to the project without visualisation.

GET IN CONTACT WITH US WE ARE HAPPY TO ADVISE YOU PERSONALLY

TOGETHER ON THE ROAD TO THE DIGITAL FUTURE

CONFIGON digitalises and speeds up your construction and manufacturing processes: We guide you on the way to the Smart Factory and thus open up new possibilities.

Our experience

We are experts in a wide range of industries. CONFIGON is already successfully in use, especially in mechanical engineering and electrical engineering. Use our experience to your advantage. Find out more about your possibilities. [Request your personal online demo now.](#)

On your way to the Smart Factory, you can also benefit from SCRAITEC, our Artificial Intelligence Solution. The use of data analysis methods from the field of machine learning enables you to achieve more efficient production in all areas. CONFIGON and SCRAITEC work hand in hand. [We look forward hearing from you!](#)
