

LIFTKON

IT ALWAYS BEGINS WITH AN IDEA

Seite 3

An idea zips through your mind, you can almost grasp it. A spark. A brainwave.

A thought that you cannot put to words. But when complemented by others, a new idea evolves.

What would you say if the term 'Handling Technology' were redefined.

A rope balancer were created that unites the best attributes and omits all insignificant things.

And then, to top it off, even more clever ideas were added? Is that possible?

As a start-up company without any history or structures out of the past, evolved from a combination of brilliant employees with good ideas and experience, we committed ourselves to exactly this challenge.

Our focus lies on 'lifting and lowering'.

Pure technique without frills and fuss.

You have high demands and are looking for new solutions with handling techniques?

We are Liftkon GmbH, a system supplier for electronic rope balancers.

THE THING ABOUT GRAVITY

Seite 4

An apple always falls straight downwards to the ground. When Isaac Newton, mathematician, physicist and astronomer, personally experienced this, he was allegedly inspired to practice his masterful law of gravitation.

No one can defy gravity – outside of Superman perhaps. And yet, we challenge it and try to oppose it.

Let objects drift upwards? Set them gently again?

What happens if they fall?

They won't!

The answer is ,Wizard'. Taking command of gravity by means of superb technique.

Our Liftkon Wizard moves your objects and holds them tight. Just as you need it.

Without any conjuring tricks.

The power of Wizard will be with you, always.

JUST LIFT ANYTHING YOU WANT

You say to yourself: OK, Wizard by Liftkon is equipped with a super technology, holds, lifts and lowers my valuable products safely and easily like magic. But can he do it at a super price?

Seite 7

It sure can!

Regardless of whether rail or pillar device, small or large loads, Wizard will conjure up a smile on your face when you hear about the price.

And where's the catch with this deal?

The catch is in your hands because we deliver everything you need including the hook.

As a system supplier we do not develop grippers.

We concentrate on lifting and lowering – There are no ,ifs' or ,buts' about it.

However, should you require support choosing the appropriate gripper, we won't let you down.

Isn't that super?

DETAILS MAKE THINGS UNIQUE

Seite 8

The magical details of Wizard are as unique as your application. You'll be fascinated.

- You get it precisely. The load weight is displayed. A measuring cell to control the unit leads to an optimum operating behaviour of the device.
- The swivels at the operating grip as well as at the pillar make infinite rotation of the load and the joint arm possible. The operator thus turns a very large thing and is endlessly productive.
- Two more buttons? Are they crazy at Liftkon? By pushing these buttons, the rope can be easily wound or unwound. Your maintenance will love it.
- Can be used over its entire length. The optimized joint arm made of aluminum. Lower operating force, less torsion, less required space, less costs. Genuine added value.
- Extra costs for standards? Not at Liftkon.
 - With a middle hinge between the arm segments you are using the entire working area. Even at the pillar.
 - First-class bearings in the arm segments guarantee precise movement every time. No more wobbling.
 - Wizard's compressed air supply hose has a 6mm inside diameter. The wind of change.
 - Our devices have an effective feature that prevents tangling. Nothing gets twisted. And you have a smooth and fluent workflow without unnecessary repair work.

DEEPLY IMPRESSED BY WIZARD...

...the operator of the devices. Because work is easier, safer und simpler.

Seite 11

...your Accounting Department. Because the working processes are accomplished quicker and more efficient. Thus costs are reduced permanently.

...and finally you. Because your employees are happier and your company is a bit more awesome with Wizard.

And now? Ready for Liftkon?

We need to talk!
