Willkommen

Bonjour

Welcome

Willkommen bei EIPA

Seit über 100 Jahren steht unser in der vierten Generation familiengeführtes Unternehmen erfolgreich im Dienste seiner langjährigen Kundschaft.

Eisen und Stahl bestimmten stets das Kerngeschäft unseres Hauses.

Ihre Forderung nach Erhöhung von Standzeiten, von durch ABRASION, EROSION oder KORROSION belasteten Bauteilen und Konstruktionen, führten uns bereits im Jahre 1960 in den Bereich des Verschleißschutzes.

Die im Fülldraht-Plus-Verfahren hergestellte EIPA-Verbundpanzerplatte, TÜV zertifiziert nach allen Anforderungen aktueller Qualitätssicherungsstandards, ist unser Produkt.

Verschleißschutz durch Auftragschweißung und die ständige Forschung nach neuen Lösungen für alle durch Verschleiß belasteten Bereiche verschiedenster Industrien, ist die Herausforderung, der wir uns immer wieder aufs Neue stellen.

Willkommen in der Welt des Verschleißschutzes

Dipl.-Kfm. Theo Palmen
Geschäftsführender Gesellschafter

EIPA vous souhaite la bienvenue

Depuis plus de 100 ans notre entreprise familiale est avec succès, en quatrième génération, au service de sa clientèle de longue date.

Le fer et l'acier déterminent depuis toujours l'activité principale de notre entreprise.

Votre exigence quant à l'augmentation de la durée d'utilisation, de composants et constructions soumis à l'ABRASION, EROSION ou CORROSION, nous a conduits dès l'année 1960 dans le domaine de la protection contre l'usure.

La tôle rechargée EIPA réalisée selon le procédé du fil fourré-Plus, disposant de la certification TÜV selon toutes les exigences des standards actuels relatifs à l'assurance de la qualité, est notre produit.

La protection contre l'usure par soudure de recharge et la recherche permanente de nouvelles solutions pour tous les domaines soumis à l'usure des secteurs industriels les plus différents représentent le défi auquel nous nous voyons toujours à nouveau confronté.

Bienvenu dans le monde de la protection contre l'usure.

Dipl.-Kfm. Theo Palmen
Directeur général

Welcome to EIPA

Four generations of our family company have now been serving our loyal customers for over 100 years.

Iron and steel are the core sectors of our business.

Your requirements for increased useful life of components and constructions affected by ABRASION, EROSION or CORROSION have directed our attention since 1960 to the subject of wear protection.

EIPA wear plates manufactured using the Filler-wire-Plus technique and TÜV-certified as meeting all the requirements of current quality assurance standards – that's our product!

Wear protection through resurface welding, plus on-going research into new solutions for all wear-affected sectors of innumerable industries is the challenge we constantly set ourselves.

Welcome to the world of wear protection!
