

Successful contract manufacturing & system integration from a single source

**Antrimon as your partner in component assembly, focusing on quality assurance, process reliability and a stable supply chain
– for efficient boiler cleaning systems.**

P-Wave AG relies on Antrimon as an experienced assembly partner for contract manufacturing and system integration. Outsourcing operational tasks brings process reliability, quality assurance, transparent documentation and an optimised supply chain.

Focus on core competencies through outsourcing

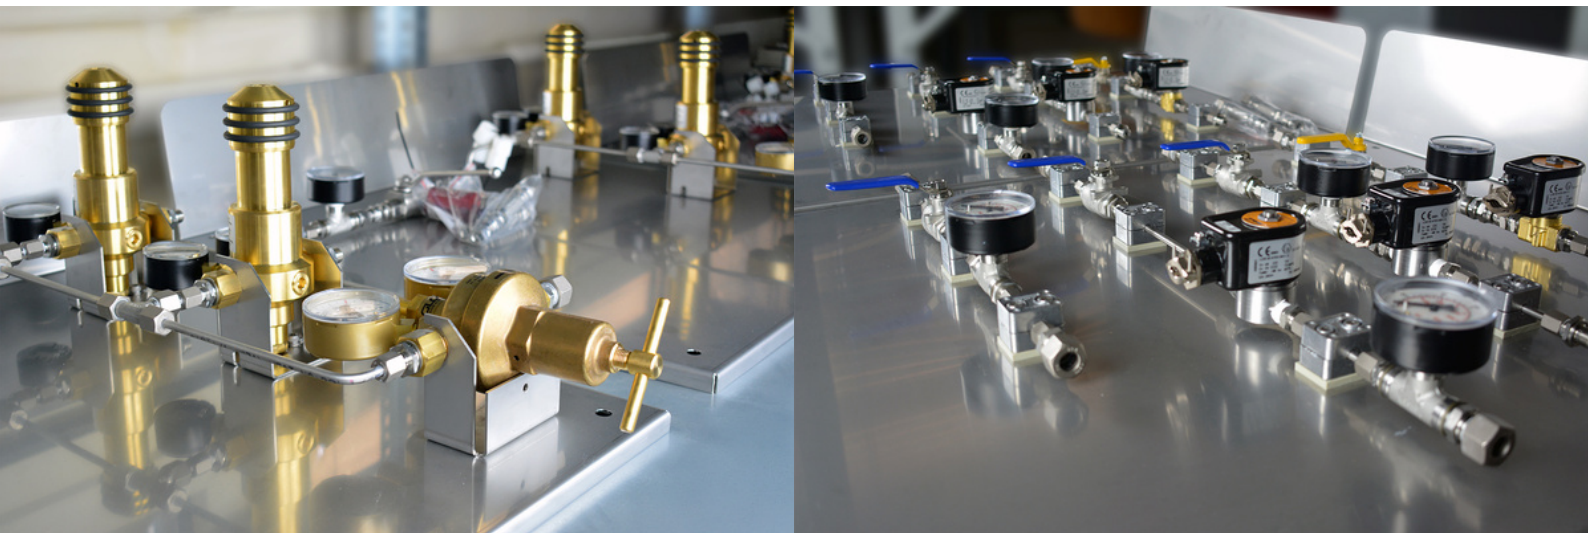

P-Wave AG specialises in innovative boiler cleaning systems using supersonic pressure waves. In order to efficiently meet growing demand, the company decided to outsource operational tasks in assembly.

The company was looking for an assembly partner for contract manufacturing and system integration who could assemble the components professionally, create clear interfaces and guarantee smooth processing through quality assurance and transparent documentation.

Two-phase collaboration in assembly and procurement

Phase 1 – Assembly & testing

- Provision of materials by P-Wave
- Professional assembly according to drawings
- Comprehensive testing and documented quality assurance
- Establishment of transparent traceability for all assemblies

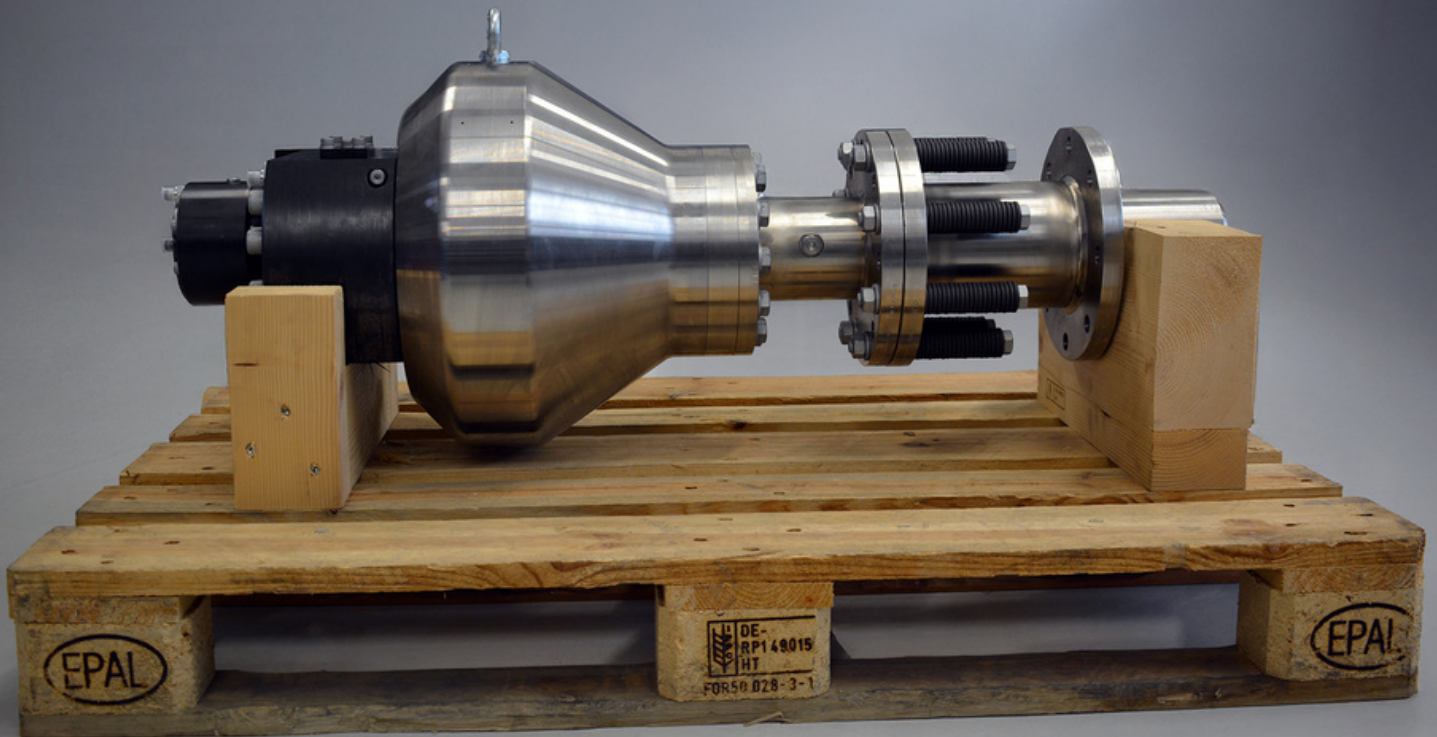

Phase 2 – Takeover of procurement

- Centralised procurement by Antrimon
- Negotiations with suppliers and conclusion of framework agreements
- Establishment of a stable supply chain with clearly defined logistics processes
- Ensuring process reliability through standardised procedures

Customer benefits: efficiency, transparency and security

The collaboration with specialist assembly partner Antrimon creates clear added value for P-Wave AG:

- Time and capacity savings through contract manufacturing and outsourcing of operational tasks
- Accelerated supply chain with stable framework conditions
- Process reliability and quality assurance through documented standards
- Transparent documentation for complete traceability
- Stable costs through framework agreements and optimised purchasing conditions
- Focus on innovation: P-Wave can concentrate on the sale of boiler cleaning systems

Conclusion

By outsourcing contract manufacturing, assembly and procurement, P-Wave AG was able to relieve its internal resources and at the same time benefit from a stable supply chain, process reliability and quality assurance. Transparent documentation guarantees full traceability – a decisive factor in the system integration of complex plants.

The result is a partnership that strengthens both innovation and efficiency – and gives P-Wave AG the freedom to further develop its sustainable boiler cleaning systems.
