guard and buzzer**

Passion for Quality

Housing with illuminated guard and buzzer

The new housing with illuminated guard and buzzer is an ES series housing combining the standard black base used for the whole range with a cover featuring illuminated upper guard and buzzer for acoustic signalling. These features make it easy to identify. The natural use for this housing is with an emergency stop button. However, the housing can also be used with other devices, such as selector switches. The upper guard protects the button from dust and avoids accidental activation, whilst enabling the emergency stop button to be easily reset. The illuminated cover makes the housing easy to identify on the machine, while the integrated buzzer can be configured to warn the operator when the emergency stop button has been pressed. The cover is available in yellow or white.

The housing with yellow cover lights up yellow when illuminated and can also be used for applications in the lift sector.

The housing with white cover is equipped with an RGB LED and can be illuminated with different colours.

The housing can also be paired with other devices, such as multiple-position selectors.

The box can be wired using the internal terminal strip, enabling selection of continuous or intermittent modes for the light and acoustic signals. Alternatively the housing can be ordered pre-wired with an M12 connector.

All housings can be equipped with a buzzer featuring selectable continuous or intermittent operation mode.
