

RDMUP

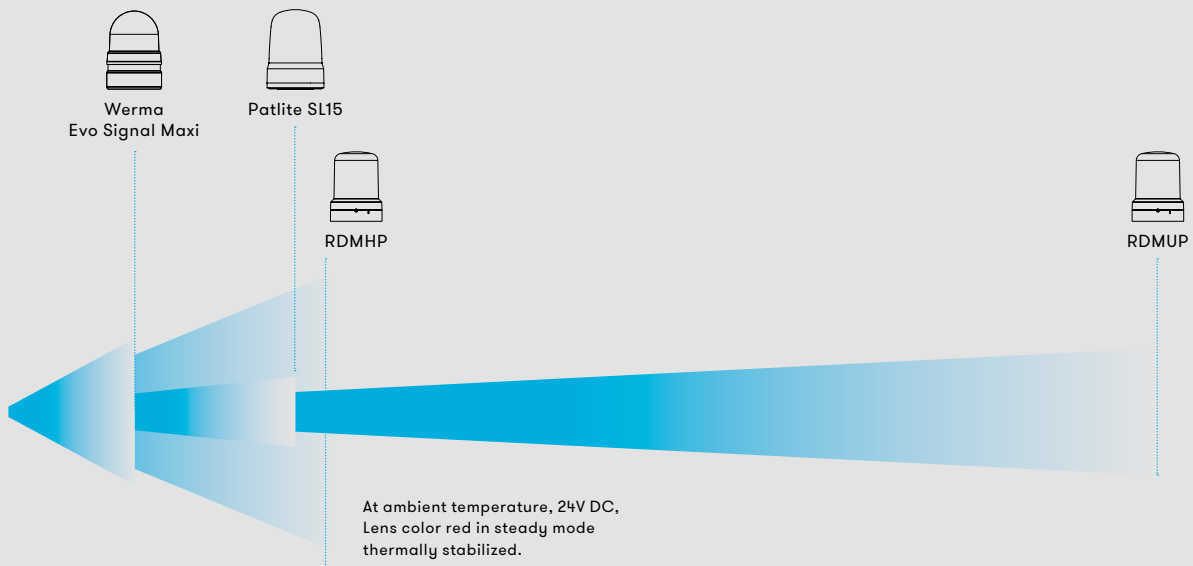

R-Series Ultra Performance

It is easy to find a beacon that works in indoor light. Finding one that fights and succeeds against bright, direct sunlight to increase safety is a different challenge. Our answer: the worldwide most powerful industrial LED signal beacon – R Ultra

AuerSignal

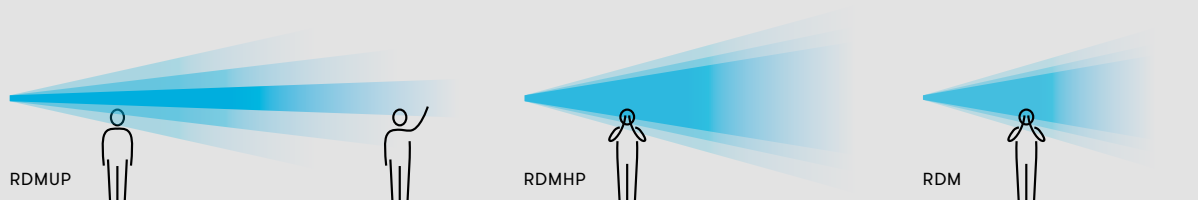

Worldwide the most powerful industrial LED signal beacon.

With the introduction of the RDM Ultra Performance we complete our successful beacon series (R-Series) with its most radical representative. 2× brighter than any other beacon on the signaling market, the RDMUP steps up to compete with the sun.

At short distance below and above the beacon, staff is protected from glare by an advanced LED focusing method.

In the middle beam angle, the brightness is 100%. At 20° from the horizontal, the brightness is reduced to a maximum of 10%.

Safety for outdoor wide distance signaling applications: Logistics / Power Plants / Harbors / Railway signaling on private property / Gates / Large moving equipment / Heavy duty machinery
