

**YOUR PARTNER
IN POLISHING**

REFLECTIVE FINISHES

Bright / Mirror Polishing uses rotating and oscillating mops and a polishing compound to reveal the natural reflectivity in Stainless Steel, Aluminium, Brass and Copper without removing any surface stock.

The finish can be measured in Gloss Units taken at 60 degrees and there are a variety of finishes on sheet to choose from such as Bright, UltraBright and our bespoke UltraMarine. On Hot Rolled material we offer a Commercial Bright Finish. Sheets from 2000 x 1000 to 4000 x 1500 can be polished.

For more information talk
to our Commercial Team.
