01

Acacia honey

1. Basic information

01 Acacia honey

Product description

- monofloral honey
- it originates from the nectar of the acacia flower
- light yellow color, mild taste, ideal for children over one year old
- contains more fructose than glucose, which contributes to its ability to remain d
in a
liquid state.

Benefits:

- mild for the stomach - does not irritate, ideal for gastritis and ulcers
- natural calming effect - helps with insomnia and stress
- low glycemic index - suitable for diabetics (moderate intake)
- natural antiseptic and antioxidant
- helps with dry cough and sore throat
- slowly crystallizes
- due to its sweetness and mild taste, it is often used as a substitute for sugar

Storage:

At room temperature, protected from moisture and direct sunlight.

Production and packaging

Our honey production and packaging:

Our honey production is based on traditional beekeeping methods, while respecting natural cycles and the health of bee colonies. Apiaries are located in clean untouched nature, far from sources of pollution, which enables high production quality honey.

We pack honey in glass packaging of different sizes (950g and 450g), with a lid, and, if necessary, in smaller packages for tastings or gift sets.

Transport packaging - 6x 950g -
6x450g

Each package contains a clearly marked name of the type of honey, the filling date and information about origin - because transparency and quality are the basis of our work.

Our goal is that every customer receives a natural product, preserved in its purest form – directly from the hive to the jar.

02

Meadow honey

1. Basic information

02 Meadow honey

Product description

- It is obtained from the nectar of flowering grasses, field flowers, bushes, shrubs and other medicinal plants.

It is precisely this variety of nectar that makes it up, in terms of quality, that gives it a reputation

rest compared to monofloral types of honey, it is yellow to dark brown in color, has a pleasant aroma and is sweet of taste.

- has a tendency to crystallization, which is a natural process and does not affect the quality of

honey Benefits: - strengthens immunity - due to

the diversity of plants - natural antiseptic - helps with

colds and sore throats - has a

beneficial effect on digestion - excellent source of energy - excellent for exhausted

and children over one year old - stimulates

appetite and general condition of the body -

contains more pollen than monofloral honey - recommended for recovery

after illness and to increase energy - can be used as a sweetener in tea, yogurt, muesli or in various

other dishes Storage: It is best to store honey in a dark and dry place, away from heat sources and direct sunlight.
