

TRANSMILLE 4610A ADVANCED MULTIPRODUCT CALIBRATOR

EXTENDED SPECIFICATIONS

V1.0

Warm Up Time	Double the time since last used, up to 20 minutes maximum	
Standard Interfaces	USB, GPIB (IEEE-488)	
Optional Interfaces	RS232	
Temperature Performance	Storage : -5°C to +60°C Operation : 0°C to +50°C	
Relative Humidity	Operation : <80% to 30°C, <70% to 40°C, <40% to 50°C Storage : <95%, non-condensing	
Altitude	Operation : 3000m (10,000ft) Maximum Transit : 12000m (40,000ft) Maximum	
EMC & Safety	The calibrator line input plug must be earthed See D.O.C for full details	
Line Power	Line Voltage Selectable : 100V/120V/230V/240V Line Frequency : 50Hz to 60Hz Line Voltage Variation : -6% +10%	
Power Consumption	28 Watts (Standby)	450 Watts (Maximum)
Low Analogue Isolation	100V	
Front Panel Connections	Voltage / 2 Wire Resistance / Capacitance Low Current (<=2A) / Resistance Compensation High current (>2A) Earth Connection Adapter Interface USB Interface Oscilloscope Output Thermocouple Output	1x Black : 1x Red 4mm Binding Posts 1x Black : 1x Red 4mm Binding Posts 1x Blue : 1x Yellow 4mm Binding Posts 1x Green 4mm Binding Posts 1 x Female 'D' Type Socket 1 x Female 'B' Type Socket 1 x Female BNC Socket 1 x Female 'Mini TC' Cu-Cu Socket
Display Information	Type Viewing Area Resolution Backlight Type	Touchscreen LCD 7" 800 * 480 LED
Indicators	Voltage / Current / High Current / TC Negative to ground Standby Indicator Output Indicator Adapter Interface Oscilloscope Output	Red LED (left of terminals) Green LED (left of Earth terminal) Red LED (left of Standby Key) Green LED (left of Operate Key) Green LED (above Adapter Interface) Green LED (below Oscilloscope Output)
Keyboard	Rubber key	
Fuses	Mains Inlet	3.15A A/S (230/240 Volt) (E006)
Transmille P/N's Exxx	Internal	5A A/S (100/120 Volt operation) (E007) 2A FF, 250V x 2 (E035) 25A, 32V x 2 Blade Fuse (E044) 630mA A/S, 250V x 2 (E002)
Isolation	Outputs are opto-isolated from mains earth and remote interfaces Maximum common mode voltage between earth and the low terminals - 50 Volts ac/dc.	
Dimensions & Weights (Length x Width x Height)	Calibrator Only Calibrator in Shipping Box Calibrator in Hard Transit case	46cm x 43cm x 19cm : 20.5 kg 60cm x 65cm x 45cm : 28 kg 70cm x 44cm x 74cm : 42 kg
Warranty Period	3 Years (Parts & Labour)	
Recommended Service Interval	1 Year	
Supplied Connections	1x Mains Lead 1 x Fuse Kit 1 x Red 4mm Lead 1 x Black 4mm Lead	1 x Adapter connection Lead
Optional Lead Set Kit	1x Voltage connection lead set 1x Low Current connection lead set 1x High current connection lead set 1x AC connection lead set	
Mounting Kit (optional)	4U rack mount kit	
Case Colour	Grey	

Due to continuous development specifications may be subject to change.

4610A Extended Specifications

General Specifications : V1.0

Interpreting Specifications

Transmille have taken great care over presenting the extended specifications in a manner that is easy to read while including high levels of details

Transmille specify specifications as both Total Accuracy and Relative Specification, with varying calibration intervals, from 24 Hours to 2 Years

By 'Total Accuracy', this means that all internal components of the calibrator have been compensated for. This includes stability, line voltage variations, temperature, humidity as well as the uncertainty of calibration as performed by Transmille Ltd.

This does NOT include external sources of uncertainty, such as the leads that are used to connect to the calibrator, and resolution of the UUT

'Relative Accuracy' refers to the stability of the instrument itself, without any external factors except temperature variation.

During re-calibration, the 'Total Accuracy' should be used for verification of the instrument. If the calibration laboratory offers better uncertainties than those offered by Transmille, new uncertainties can be calculated by combining the relative specification and the new imported uncertainties.

All of Transmilles Total Accuracies are presented to 95% confidence, $k=2$.

This is for ease of use in a 17025 accredited laboratory, where other contributions will likely also be calculated for $k=2$, minimising the need for re-calibration of uncertainties.

1 year Total Accuracy Specifications at Tcal $\pm 5^{\circ}\text{C}$

Range	Resolution	Max. Burden Current	Typical Output Resistance ¹	Overload Protection	1 Year Total	
					ppm set	μV
0-202mV	0.01 μV	1mA ²	50 Ohms	20 V	12.5 +	0.8
0.2-2.02V	0.1 μV	50mA	0.2 Ohms	150V	9 +	2
2-20.2V	1 μV	50mA	0.2 Ohms	150V	7.5 +	20
20-202V	10 μV	20mA ³	0.5 Ohms	1200V	10.5 +	200
200-1025V	100 μV	20mA ³	0.7 Ohms	1200V	11.5 +	2000

Stability (Accuracy relative to calibration Standards)

Range	24 Hour Stability		Noise ⁴ μV	90 day Rel		180 Day Rel		1 year Rel		2 year Rel	
	ppm Set	μV		ppm Set	μV	ppm Set	μV	ppm Set	μV	ppm Set	μV

200-1020V	5 +	1100	363	8 +	2000	9 +	2000	10 +	2000	14 +	2800

Notes

Note 1 : Allowance must be made for output resistance when driving into a load.

Note 2 : Limited by 50 Ohm output impedance.

Note 3 : Internally adjustable from 2mA to 30mA - Factory set to 20mA as standard.

For safety the trip is controlled by a fail-safe circuit independant of the processor which shuts the high voltage output off in the event of an overload.

Note 4 : Typical RMS noise figures at 50% of full scale, bandwidth 1Hz to 10Hz.

High Voltage Safety

High voltage output is ramped to allow instrument under test to auto range.

Standby is automatically activated when setting voltages greater than 20V or 200V from a lower voltage

Standby is automatically selected for high voltage (>20V) after 20 minutes on the same setting. This function can be disabled

High voltage (> 20V) output is indicated to user through an audible warning beep.

An external high voltage output/standby control switch is available as an option.

2 Wire output / Remote sensing not available.

Isolation : Floating or grounded selection available as standard.

Maximum floating voltage : 100V

Specifications apply at TCal $\pm 5^{\circ}\text{C}$

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

Due to continuous development specifications may be subject to change.

Notes

Note 1 : Typical RMS noise figures at 50% of full scale.

Note 2 : Power & temperature sensor on 30A range - microprocessor monitors & protects from overheating.
Higher resistance loads allow a longer ON period. See graphs 1 and 2 for details.

Note 3 : Specifications apply to loads of less than 10% of the maximum burden voltage.

Note 4: Zero or floor allowance.

Specifications apply at TCal $\pm 5^{\circ}\text{C}$

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

Due to continuous development specifications may be subject to change.

4610A Extended Specifications

DCI Specifications : V1.0

www.Transmille.com

Page 4

Measurement Conditions : Ambient Temperature 20°C, Mains Voltage 230V, Mains Frequency 50Hz
 Allow at least 7 minutes 'off' period between current output

Shorter periods will reduce the output time available.

A higher ohmic value load (for example, a 0.1R Shunt) allows greater output time as more heat is dissipated within the shunt / load. With lower loads more heat is dissipated within the instrument, reducing output time

Into a 0.1R Load outputs of up to 20A are available for periods of greater than 30 minutes continuously, considerations of self heating of the external load/Uut should be considered due to the power being dissipated

Notes	
Note 1 :	Current limited by 50 ohms output resistance.
Note 2 :	Internally adjustable from 2mA to 30mA - Factory set to 20mA as standard For safety the trip is controlled by a fail-safe circuit independant of the processor which shuts the high voltage output off in the event of an overload.
Note 3 :	Frequency and voltage combinations are limited.
Note 4 :	Specifications apply up to 10% of maximum load current. Above this level, allowance must be made for output resistance.
Note 5 :	Zero or floor allowance.
Note 7 :	THD less than 0.39% of output - 10Hz to 1MHz bandwidth at frequencies up to 50kHz
Note 9 :	Maximum frequency 10kHz above 330V

2 Wire output / Remote sensing not available.

Maximum floating voltage : 100V.

Isolation : Floating or grounded selection available as standard.

Specifications apply at TCal $\pm 5^{\circ}\text{C}$. Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

High Voltage Safety	
High voltage output is ramped to allow instruments under test to auto-range.	
Standby is automatically activated when setting voltages greater than 20V or 200V from a lower voltage.	
Standby is automatically selected for high voltage (>20V) after 20 minutes on the same setting for frequencies	
This function can be disabled by the user	
High voltage (> 20V) output is indicated to user through an audible warning beep. This can be disabled by the user	

Due to continuous development specifications may be subject to change.

Notes

Note 1 : Temperature sensor on 30A range - microprocessor monitors & protects from overheating.

Higher resistance loads allow a longer ON period. See graph 5 for details.

Note 2 : Specifications apply to loads of less than 10% of the maximum burden voltage.

Note 3 : Frequency limited to 10kHz above 1A

Note 4 : Frequency limited to 5kHz above 10A

Due to continuous development specifications may be subject to change.

4610A Extended Specifications

AC Current : V1.0

Page 10

Driving Coils and Inductive Loads

When driving any load exceeding the maximum compliance voltage will cause the calibrator to trip into standby

The maximum compliance voltage on the 30Amp range is specified at a max 2.8V RMS, 7.8V Peak to Peak at 220V supply
Slightly higher compliances are available when powered from a 240V supply.

When using EA002 with leads supplied it is possible to drive 30Amps/50Hz from a 230V supply, falling to 10Amps at 400Hz
Specifications apply at TCal $\pm 5^{\circ}\text{C}$

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

Measurement Conditions : Ambient Temperature 20°C, Mains Voltage 230V, Mains Frequency 50Hz
Allow at least 7 minutes 'off' period between current output

Shorter periods will reduce the output time available.

A higher ohmic value load (for example, a 0.1R Shunt) allows greater output time as more heat is dissipated within the shunt / load. With lower loads more heat is dissipated within the instrument, reducing output time

Into a 0.1R Load outputs of up to 20A are available for periods of greater than 30 minutes continuously, considerations of self heating of the external load/Uut should be considered due to the power being dissipated

Total Accuracy Specifications at TCal $\pm 5^{\circ}\text{C}$

Range	Resolution	90 day ppm	180 Day ppm	1 year ppm	2 year ppm
1Hz - 1.2MHz*	1Hz	0.8	0.9	1	1.4

* Frequency continuously variable. Maximum frequency range available on the 2V AC Range

Specifications apply at TCal $\pm 5^{\circ}\text{C}$

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

PWM (%) - Frequency Range 5Hz to 50kHz	Duty Cycle Accuracy
5% to 95%	Better than 0.1%

PWM (Level)	Level Accuracy
2V to 10V	Better than 0.1V

PWM (DC Offset)	Level Accuracy
+0V to +5V	Better than 0.2V

PWM Output provides a square wave output with variable level, duty cycle and DC offset

Due to continuous development specifications may be subject to change.

4610A Extended Specifications

Frequency Output : V1.0

For 2-Wire connection allow 35mW on all resistance specifications.

The 2 and 4 Wire value for each resistor is calibrated. The 2-Wire value is measured at the terminals

The 4-Wire values are taken using the zero position to NULL the measuring system.

Specifications apply at TCal $\pm 5^{\circ}\text{C}$.

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

Due to continuous development specifications may be subject to change.

330M Ω to 1G Ω	100k Ω	10nA	10000	800k Ω

Simulated resistance is available as 2 Wire, 2 Wire Compensated and 4 Wire
 Specifications apply for 4 Wire mode up to 100k Ω . Specifications above 100k Ω apply to 2 Wire
 2 Wire compensated Output : Add 6uV divided by Measurement Current in Amps to floor specification
 2 Wire output is relative to the 0 Ω output of the calibrator. Connect multimeter and press REL/Null with 0 Ω set

Input measurement current must be a constant DC current isolated from earth
 Performance/compatibility may be affected using other measurement methods/techniques for the simulated resistance function
 eg. AC or pulsed, in which case passive resistance functionality may be employed.
 Current must be stable for a period of 1s - it is therefore recommended the UUT range is selected manually

Specifications apply at TCal $\pm 5^{\circ}\text{C}$.

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

For the highest possible accuracy and dependability of the measured value, regardless of the measurement technique used, the 4000 Series calibrators use passive standard capacitors, the calibrated value of which is displayed when selected.

Thermocouple Type	Range Source / Measure	90 Day' Zero + % Output	180 Day' Zero + % Output	1 Year' Zero + % Output	2 Year' Zero + % Output
1mV / °C	-100°C to +100°C	4uV + 0.011	4uV + 0.013	4uV + 0.014	6uV

Note 1 : Does not include cold junction compensation errors

Cold Junction Compensation Error = $\pm 0.2^{\circ}\text{C}$

All thermocouple measurement specifications assume correct compensation cable is being used

Specifications apply at TCal $\pm 5^{\circ}\text{C}$.

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

Due to continuous development specifications may be subject to change.

General Specifications

PRT Type	Range °C	1 Year * ± °C
PT25	-200 to 0	0.50
	0 to 800	0.60
PT100	-200 to 0	0.13
	0 to 800	0.55
PT250	-200 to 0	0.25
	0 to 800	0.30
PT500	-200 to 260	0.10
	260 to 500	0.90
PT1000	-200 to 0	0.08
	0 to 800	0.45

2, 2 Wire compensated and 4 Wire Simulated Output Available

Display resolution : 1m°C

Minimum terminal voltage = 80mV

Maximum current input = 20mA

Input measurement current must be a constant DC current isolated from earth

Performance/compatibility may be affected using other measurement methods/techniques for the variable PRT function

e.g.. AC or pulsed, in which case passive resistance functionality may be employed.

Current must be stable for a period of 1s - it is therefore recommended the UUT range is selected manually

* Specifications apply at TCal ± 5°C.

Outside this range an allowance of 0.18 x 1 Year Spec. per °C should be added.

Due to continuous development specifications may be subject to change.

Page 19

General Specifications	
Voltage Range	1V to 1000V DC
Current Range	0.5mA to 30A DC
Output Terminals	Voltage output from top (Black & White) terminals 0.5mA to 2A current output from middle 2A (Black & Red) terminals 2.01A to 30A current output from bottom 30A (Blue & Yellow) terminals Note : Indicator LEDs for both sets of terminals will illuminate to indicate DC Power mode

1 Year Accuracy Relative to Calibration standards

Current Range	Resolution	Setting	Zero
0.5mA to 300mA	10uA	0.100%	40uA
0.3A to 2A	0.1mA	0.015%	400uA
2.01A to 30A	1mA	0.04%	4mA

1 Year Accuracy Relative to Calibration standards

Voltage Range	Resolution	Setting	Zero
20V	1uV	0.0025%	40uV
200V	10uV	0.0030%	400uV
1000V	100uV	0.0030%	4000uV

High Voltage Safety

High voltage output is ramped to allow instruments to auto range

Standby is automatically activated when setting voltages greater than 20V or 200V from a lower voltage

Standby is automatically selected for high voltage (>20V) after 20 minutes on the same setting. This function can be disabled

High voltage (> 20V) output is indicated to user through an audible warning beep

An external high voltage output/standby control switch is available as an option

30A available as standard - external amplifier **not** required

Specifications apply at TCal $\pm 5^{\circ}\text{C}$.

Outside this range an allowance of 0.18 x 1 Year Spec. per $^{\circ}\text{C}$ should be added.

Due to continuous development specifications may be subject to change.

General Specifications	
Voltage Range	1V to 1000V AC
Current Range	0.5mA to 30A AC
Frequency Range	10Hz to 400Hz
Output Terminals	Voltage output from top (Black & White) terminals 0.5mA to 2A current output from middle 2A (Black & Red) terminals 2.01A to 30A current output from bottom 30A (Blue & Yellow) terminals Note : Indicator LEDs for both sets of terminals will illuminate to indicate AC Power mode

1 Year Accuracy Relative to Calibration standards

Current Range	Resolution	Setting	Zero
0.5mA to 0.2A	10uA	0.2%	40uA
0.2A to 2A	0.1mA	0.1%	400uA
2.01A to 30A	1mA	0.05%	4mA

1 Year Accuracy Relative to Calibration standards

Voltage Range	Resolution	Setting	Zero
20V	1uV	0.035%	900uV
200V	10uV	0.04%	7.5mV
1000V	100uV	0.04%	75mV

Frequency Specifications

Frequency	
Range	40 to 400Hz (1V to 699V) : 46 to 400Hz (700V to 1000V)

Phase Specifications

Phase Angle	Resolution	Accuracy
0° to 359.9°	0.1°	0.1° + 6us*

*6us represents 0.109° at 50Hz or 0.87° at 400Hz

Note : Phase accuracy specification applies for levels above 10V/.5A into loads of 100mOhms and greater

4600 calibrators **automatically correct for any errors in the phase** caused by inductive loading, for example when using the clamp coil adaptor.

Note that when in Power output mode the Voltage and Current negative terminals are internally tied together, and as default negative to ground is selected. Phase specifications apply only when the UUT current and voltage measurement channels are isolated from each other. Ground loops caused by externally earthing or tying low's together will cause phase errors

High Voltage Safety

High voltage output is ramped to allow instruments to auto range

Standby is automatically activated when setting voltages greater than 20V or 200V from a lower voltage

Standby is automatically selected for high voltage (>20V) after 20 minutes on the same setting. This function can be disabled

High voltage (> 20V) output is indicated to user through an audible warning beep

An external high voltage output/standby control switch is available as an option

30A available as standard - external amplifier **not** required

Specifications apply at TCal ± 5°C.

Outside this range an allowance of 0.18 x 1 Year Spec. per °C should be added.

We truly believe in offering Solutions in Calibration, offering bespoke solutions for calibration laboratories and manufacturers across the globe. Our mission statement is not just a phrase, it is our design and support philosophy, offering support and advice that cannot be found elsewhere with a friendly atmosphere.

Transmille was founded in 1995 as a commercial calibration service, and soon after began to develop and manufacture a range of electrical calibration products and software to answer a growing requirement for solutions to common problems. Following this small beginning, Transmille has worked year on year to provide unique equipment and software to benefit calibration laboratories and manufacturers across the globe.

Ever since releasing the very first products Transmille have continued to innovate and develop new products for the metrology

community, from world first products such as the 2100 Electrical Test Equipment calibrator, through to the worlds lowest cost multi product calibrator the 1000 series.

Transmille now produce over 600+ calibration instruments per year, shipping instruments to customers ranging from National Standards Laboratories and manufacturers through to small calibration test houses around the world.

An unrivalled commitment to quality and innovation drives Transmille forwards, with a dedicated design and support team in house with a combined experience of over 60 years in manufacture and design of electrical calibration products and software.

With local distributors across the globe, we can offer one to one personalised support, no matter how large or small the customer.
