TO KEEP IN MIND

- The electrical box is only an **electrical distribution panel**, so it **does not include the consumption**.
- It won't work if you don't order the **kW for the consumption**.
- The **triphasic sockets** can only be used with a triphasic electrical box.
- The electrical boxes are only equipped with a **30mA power system protection.**

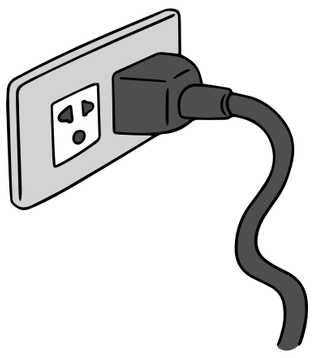

WHAT SHOULD I ORDER?

1- How many kW do I need? Depending on the power required, choose an electrical panel with the number of kW corresponding to the needs of the equipment to be connected.

2- How many kW does my box need? Depending on the box picked, select as many kW as the panel needs. E.g.: electrical box 10kW + 10kW consumption.

3- Which sockets/protections do I need? Depending on the elements that need to be connected to the electricity supply, select the corresponding sockets and protections. The electrical sockets will come from where the exhibitor indicates.

The exhibitor must indicate how he wants the installation of the hired elements.

If no specifications are received, the supplier will carry out the connection in the manner he considers to be the most technically appropriate.
