METALLIC MESH MADE IN ITALY

Made of tubular metal mesh covered with enamel and protected by a special lacquer that prevents color mutation, it is **soft and smooth**.

Equipped with a **unique lightness and ductility**, with a dense but delicate texture, it is available in various colors, thicknesses and sizes.

This made in Italy metallic organza is also **resistant to water, color and nickel free** and on request can be customized in colors and thickness to increase its resistance.

PREMIUM PACKAGING

Its particular structure makes it ideal to model on different products as thanks to its flexibility it adapts perfectly to the body of the object, taking its shape like a second skin.

For **wine premium packaging** are available two different kits, one that wraps the bottle completely and another one that leaves the mesh loosely open on the body of the bottle.

How to PACK A BOTTLE

1 2 3 4 in 4 steps

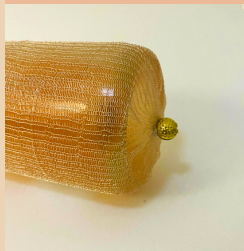

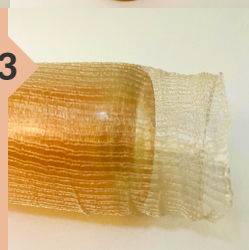

KIT FOR A COMPLETELY WRAPPED BOTTLE

1 Prepare all the material (bottle, mesh and clam-shell calottes) and lightly widen the mesh on the open finish.

2 Gently pull the mesh from the top leaving the closed final part outside and slide it over the whole body of the bottle.

3 Leave about 4 cm of mesh on the bottom of the bottle. Tighten and fold the end creating a ball and close it with the calotte.

4 Bring up any excess material from the bottom and better fix the mesh on the body and neck of the bottle.

With naturally bright colors it gives light and splendor to the objects it contains creating a pleasant and mysterious effect of great impact.

The wine premium packaging kits are available in **five different colours**: gold, silver, copper, titanium, chestnut and are supplied with clam-shell calottes.

How to PACK A BOTTLE

1 2 3 4 in 4 steps

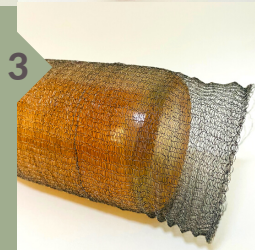

KIT FOR A LOOSELY OPEN EFFECT BOTTLE

1 Prepare all the material (bottle, mesh and clam-shell calottes) and lightly widen the mesh on one end.

2 Gently pull all the mesh from the top and slide it over the whole body of the bottle.

3 Leave about 4 cm of mesh on the bottom of the bottle. Tighten and fold the end creating a ball and close it with the calotte.

4 Bring up any excess material from the bottom and pull down the mesh in the upper part widening and fixing it as you like.
