

Bandall Print & Band

- › Print & band in one single step
- › High speed intelligent printing
- › A huge selection in pre-printed and blank paper and film
- › Recyclable and biodegradable banding
- › Single property materials
- › Save on primary packaging, drastically reducing wastage of obsolete stocks

Only Bandall can band your products while printing as much and at as many points onto the band

Unique to Bandall's High Performance Print & Band model with integrated printer is the added capability for unlimited printing in any number of positions over the entire width and length of the 360° band.

Product identification

For example, a small change to a product could mean that stocks of primary packaging are outdated and are wasted. This is now in the past with Bandall Print & Band.

Reduce waste by simplifying primary packaging and with a single chosen band print all variables during the banding process

High Performance and increased uptime

A well designed and/or unprinted primary packaging can benefit by printing variables directly onto the band at application. Such as product titles, flavours, fillings, nutritional values, ingredients, EAN codes, dates, promotional information and all other data. Updating the packaging in an instant.

- › *Guaranteed precision positioning*
- › *Optimum product identification and data management*
- › *Increase uptime, efficiency and savings*

Efficiency and savings

Pre-setting the print for several batches means no time is wasted between batches.

Also banding with a plain band is an option, when printing all variables such as logos, barcodes, nutritional values, et cetera, directly onto the band

Clever design for maximum efficiency, all variables can be printed while banding

The Bandall and printer function autonomously - continuity is assured by the ingenious double buffer system
