

Our products

Solid stretch films

Goliath stretch films have superior puncture-resistance 3 times comparable to a standard film. Our reinforced edging reduces neck-in, providing better coverage on a load and prevents any damage to reels if they are dropped, meaning not a single metre of film goes to waste. Goliath provides remarkable strength similar to material that is double the thickness, setting the new benchmark for versatile polythene.

We have scrutinized our manufacturing process to create the perfect formula for a trustworthy, reliable stretch film which will deliver time and time again, with green, eco-friendly qualities. Made with LLDPE containing a **verifiable and traceable source of post-consumer plastic waste** that is also **100% recyclable**.

Strong, robust and adaptable; three components which make an exemplary stretch film.

goliath **PCW**

Our strongest, most sustainable stretch film to date. Tough enough for any task and boasting unmatched green credentials.

Product Information

Our new Goliath PCW film is made from **30% post-consumer recycled waste** and is **exempt** from the UK and EU Plastic Packaging Tax. Not only does this save you additional costs, it also contributes towards your own sustainable supply chain operations and is **fully recyclable** within existing infrastructure.

With **identical strength** and **durability** to the original virgin film, Goliath PCW yields exceptional load retention, puncture-resistance and superior pallet stability with **significant cost savings**.

Thanks to its top flexibility, it can also provide a substantial **decrease** of work related injuries, as **less effort** is required to wrap.

Pallets wrapped in Goliath PCW require half the amount of material compared with standard films, generating **half of the waste**, with major **reductions in packaging costs** and recycling taxes.

Product Key Features

30% PCW source

Reinforced edges

Holds over 1 tonne

High slip outer layer

Inside tack

Superior clarity

Coloured and printed

No width loss
