

MULTIPAK

Environmentally friendly products will save the future.

ACKforma

You will enjoy taste and practicality together with Multipak products suitable for microwave and oven. We offer practical solutions for both takeaway foods and your kitchen by means of its heat-resisting structure and raw material suitable for food contact.

From the freezer via the oven to the table, Ackforma trays are developed for packaging prepared or semi-prepared food, intended for warming-up or heating in their original package with a microwave or conventional oven. Ackforma is also an excellent choice for food that doesn't require warming-up or heating, e.g. fresh food, ready to make bakery products, desserts and dry food.

Ackforma packaging can take many forms, from single or multipack to be used with or without lids, sealed, wrapped in sleeves and/or together with other integrated components.

Paperboard tray is a valuable resource. Not only as the main environmentally friendly solution but also as an economical way to put substance in your business.

Sealer

Tray sealers have been designed to seal plastic film and cardboard lids onto food trays. The machine is intended for the food industry: grocery stores, quick service restaurants, other restaurants, institutional kitchens and canteens and food distribution outlets. Capacity: 200-300 seals per hour. Placing of tray, stretching film over tray and thermal sealing - duration is about 10 seconds. Usage: All tray sealers, are equipped with a timer and a magnetic lid closing mechanism, which make the sealing process easier - the lid doesn't have to be held closed manually.

The sealing time (1-10s.) is adjusted by timer, the magnet holds the lid closed. When the adjusted time has elapsed, the lid opens automatically. The hotplate is spring activated, which ensures optimum sealing performance. The design ensures that the machine is easy to use and a rhythm of operation is achieved. The machine is also light-weight in use. The materials used in the construction are easy to maintain and the number of components subject to wear and tear has been kept to a minimum.
