Silicone molded parts from our own production

Liquid-silicone (LSR) products are versatile due to their universal material properties, such as Household and sanitary technology, automotive industry, electrical engineering, dental and medical technology, etc.

The LSR molded parts are temperature resistant up to +250 °C or are flexible in the cold up to -50 °C, have excellent chemical resistance and a wide variety of colours.

Our engagement

Bildungsnetz
Schweizer
Schreiner
Genossenschaft

We are an institution that maintains a diverse network of contacts in both the carpentry and education sectors. Our educational network serves all teachers and students in the carpentry sector.

poesia® door stop

Door stops are recommended for protecting walls and furniture from being knocked by door handles. These are manufactured by us in our factory in Unterkulm.

We have a choice of green, yellow, luminescent, black, orange, white and aluminum colored. The door stops are manufactured out of high-quality silicone and have the desired shock absorbing properties. This protective function ensures that walls and furniture, but naturally also doors and door handles, are safeguarded against unwanted knocks, keeping them looking good for longer. The elastic protective function of the door stops prevents costly repair works.

The silicone used for their manufacture leaves behind no traces such as unsightly discolouration and stripes on walls or items of furniture.

The door stops are tensile on both sides and are easy and quick to install.

The «made by poesia» door stoppers can be ordered via the webshop, app, website, telephone or bypost. Dispatch is made within 24 hours after receipt of order in boxes of 2.

Art. Nr.	Color	Pack sizes
860.0019	Luminescent	2 pce
860.0020	Aluminium	2 pce
430.0022	Yellow	2 pce
430.0023	Green	2 pce
430.0024	Orange	2 pce
430.0025	White	2 pce

Assembly of the seals

poesia® manufactures new seals for the replacement of old and defective seals in older properties according to the customer's specifications. The warehouse in Unterkulm stocks over 5,000 different types of gasket.

Necessary information

poesia® requires the exact window dimensions from the customer, including the measuring point (rebate dimension or external dimension) and, if applicable, the customer's commission details. The desired material type is also required. In most cases, the correct gasket type is in stock. If this is not the case, poesia can produce the required gasket type for the customer. An interactive order form for sealing frames can be downloaded from www.poesia.ch.

Maximum precision

Once all the details have been provided, the gasket is cut to the required length by hand at the factory in Unterkulm using a 45-degree mitre cut and glued together in all four corners. Depending on customer requirements and the material, welding, vulcanising, splicing or injection can also be used as an alternative to gluing. By far the most common processing method is the bonding of TPE and EPDM seals. However, the material must be taken into account when choosing the processing method: Silicone is rather unsuitable for bonding and welding is only possible for seals made of thermoplastic elastomers. Vulcanisation can be used for silicone and EPDM. Splicing is the latest process and is used for EPDM profiles, among others, and only works with elastomers such as EPDM, silicone, etc.

Commission details

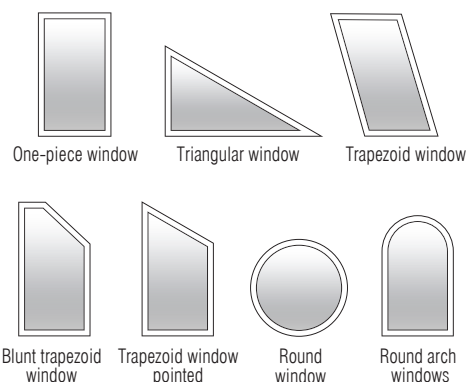

The seals are labelled and picked before dispatch.

Important function

Seals are used to protect interior spaces from excessive heat in summer and to keep the heat inside in winter. Faultless seals help the occupants of properties to save money.

Availability

poesia® produces the seals according to customer requirements in small to large series and the delivery time is usually 10 to 14 days. Smaller quantities can be delivered as express orders in three to five days.

see poesia.ch

We are a member

We are the leading national trade association for window and window elements. We promote, develop and communicate the necessary fundamentals. We are committed to good framework conditions for our members. We make an important technical and energy-related contribution to the national building construction market. We support the energy transition in the knowledge that windows and window elements make a key contribution to ensuring that the Swiss building stock becomes an energy producer in the future.

Seals for conservatories

A cosy conservatory increases living comfort and is part of a modern lifestyle. To ensure full comfort even on cold, windy days, it is important that the conservatory has effective seals. The seals are extremely important to keep out wind and weather. This is the only way to enjoy the conservatory to the full.

Natural wear and tear

Over time, many seals become brittle and lose their effectiveness. This is usually the case after around 10–15 years. It is therefore advisable to replace the seals with foresight.

Increasing demand

The demand for conservatory seals has risen sharply in recent years. This is why poesia has created a new product group and added it to its range.

As demand continues to rise, new seals are constantly being added. The range even includes seals for conservatory systems that have long since been discontinued.

The seals are already available in small quantities, are made of TPE (thermoplastic elastomers) or VMQ (silicone) and are manufactured by poesia in Unterkulm.

Well protected

Customers who replace the old seals can enjoy the benefits of a conservatory even more.

Replacement seals for caravans and motorhomes

We offer customised solutions for sealing caravans, motorhomes, shower cubicles, refrigerators, windows and doors.

Brittle, hard and torn seals in caravans and motorhomes are not uncommon. They are annoying and noticeably reduce comfort. This is particularly noticeable in cold temperatures when the wind blows through the cracks.

Seals in windows and doors are affected. The poesia group also offers replacement seals for fridges and showers in almost all sizes and dimensions. Campers who need a replacement seal can send a piece of the defective seal to the poesia group, send in a picture or pop into Unterkulm. The gasket specialists will then search for the replacement gasket. If no suitable seal is available, poesia-gruppe will create a new profile for it to help the customer. This is already possible in small quantities.

Biobased seal

Available from stock
Scale 1:1

poesia-dichtungen®

Biobased TPE seal

Seals made from bio-based thermoplastic with a bio content of 40 %.

Bio-TPE seals have the same quality and functions as oil-based TPE seals. But they are even more sustainable and ecological. Bio-based TPE seals are also recyclable.

For sustainable building owners

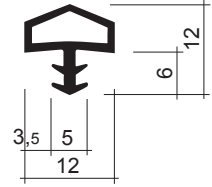

Bio-TPE seals are installed in doors and windows and protect against cold, heat, draughts and sound just as effectively and reliably as seals made from oil-based TPE.

Available in small quantities

The seals made of bio-based thermoplastic are available in small quantities starting at 1 metre. Custom-made products are possible from a minimum purchase of 300 metres in length.

Aluminium profiles AL 1 - 11

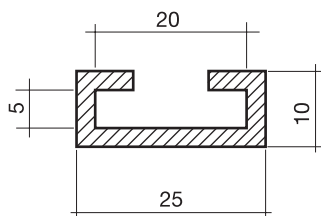

poesia-dichtungen®

Available from stock

Scale 1:1

AL 1 Retaining profile door and gate profile TT (see TT3, 8, 9, 12, 13, 14)

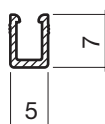

Allega 3607

Material: Aluminium
Color: blank

AL 2 Fits profile AF 5, 6 and BD 5, 6, 8, 9

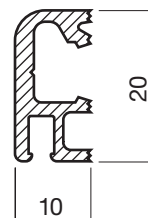

Hebgo 131
Retaining profile for grooving,
for rubber and brush seals

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

AL 3 Fits profile AF 5, 6 and BD 5, 6, 8, 9

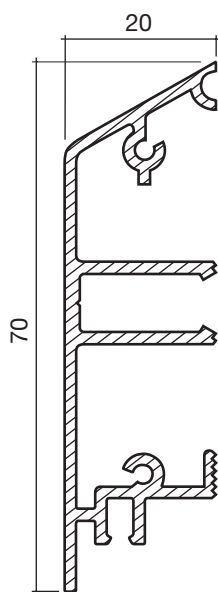

Hebgo 124
Door base for renovation, with seal and half
profile AL 8 - 14 for rubber and brush seals
Mounting set 901.9

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

AL 4 Fits profile BD 5, 6, 8, 9

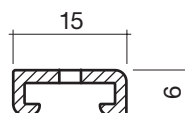

Hebgo 157
Door base for rubber or brush seal
Mounting set 901.9
Cover plates 907

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm

AL 5 Fits profile FD25, 26, BD11

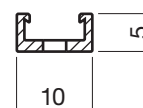

Hebgo 125
Height adjustable accessory 908
(Height adjustment also available for BD 10)

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

AL 6 Fits profile FD 50

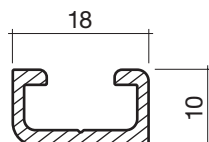

Hebgo 127
Also for renovation

Material: Aluminium
Color: blank
Length: 5250 mm or cuts

AL 7 Fits profile FD 10, 51

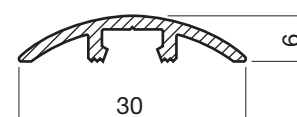

Hebgo 117
Also for renovation

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

AL 8 Seuil bombé Joints BD 1 jusqu'à BD 13

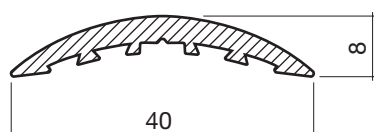

Hebgo 153

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

AL 9 Half-round profiles to the floor finish Seal BD 1 to BD 13

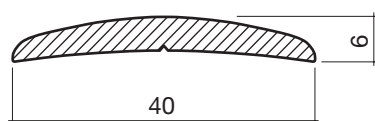

Hebgo 150

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

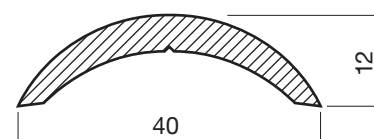

AL 10 Half-round profiles to the floor finish Seal BD 1 to BD 13

Hebgo 151

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

AL 11 Half-round profiles to the floor finish Seal BD 1 to BD 13

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

Aluminium profiles AL 12 - 21

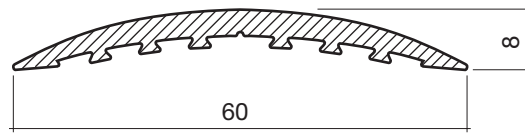

poesia-dichtungen®

Available from stock
Scale 1:1

AL 12

Half-round profiles to the floor finish
Seal BD 1 to BD 13

Hebgo 154

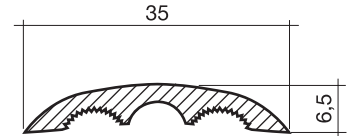

Material: Aluminium
Color: blank, colorless or bronze anodized
Length: 5250 mm or cuts

AL 13

Bottom closure to planet or
BD 1 to 13

Rail Planet avec surface plane

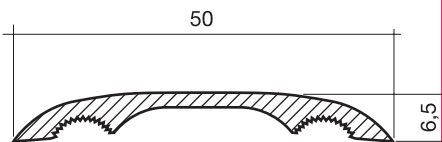

Material: Aluminium
Color: incolore anodisé
Length: 650, 750, 850, 950, 1050, 1150, 1250, 1350 mm, max. Length 6 m

AL 14

Bottom closure to planet or
BD 1 to 13

Planet hollow flat rail

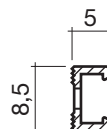

Material: Aluminium
Color: colorless or brown anodized
Length: 650, 750, 850, 950, 1050, 1150, 1250, 1350 mm, max. Length 6 m

Determination of round shower tray radii

You have already purchased or installed a round shower basin. It's that easy to determine the shower basin radius:

Example 1

Example 2

Example 1:

The formula:

A minus B = Radius

Side dimension **A** = 800×800 mm

Dimension **B** = 300 mm

Radius = 500 mm

Side dimension **A** = 900×900 mm

Dimension **B** = 350 mm

Radius = 550 mm

Example 2:

Place two measuring strips on the legs of the roundand and measure, then diagonally the distance to the measuring bar.

X = 207 mm = radius 500 mm

X = 227 mm = radius 550 mm

Each shower pool is different in shape, width, height and radius. But with our help it is easy to determine the correct radius of your shower basin:

1. Measuring the side dimension **A** of the shower basin (800, 900, 1000 mm)
2. Measuring the side dimension **B** to around the beginning of the rounding
3. Calculate **radius**

Siphon bell seal

poesia-dichtungen®

Available from stock

Made from high-quality silicone for the cistern. For all standard drain valves of exposed and concealed cisterns.

Prevents limescale deposits for a long service life. (Made in Switzerland)

Partnership with DSU

1. Take measurements

Taking correct measurements is important when ordering made-to-measure door seals. There are three methods to determine the seal measurements.

- A size (Outside-to-Outside)
- B size (Magnet-to-Magnet)
- C size (Dart-to-Dart)

Outside-to-outside (A size) measurements can be applied for all door seals. We advise to take outside-to-outside measurements while the seal is still fitted in the door or drawer.

For dart type profiles it is possible to measure Dart-to-Dart (C size). In practice this means you measure the inside edge of the slot on one side to the outside edge of the slot on the other side. This equals the Centre-to-Centre measurement or C size.

Magnet-to-Magnet is measured from outside of the seal magnet to outside of the seal magnet and is referred to as B size.

2. Profile selection

Identify the door seal profile by using the cross section of the seal. A cross section of the seal profile can be cut out from the top side of the door seal using scissors or a craft knife.

Identify the profile by using our door seal sample kit, this catalogue or our website www.dsu-nl.com.

If you are unable to find a matching profile, we are there to assist you. Please send us a clear photograph of the cross section via our website, email or WhatsApp. We will answer which profile to use or suggest a suitable alternative.

It is also possible to send a cross section of the old door seal by post along with our order form. The order form can be found on our website.

Sample kit

We have compiled a professional door seal sample kit for commercial refrigeration engineers. The sample kit contains over 100 of the most commonly used seal/gasket profiles. This sample kit can be ordered as WH33.

poesia-dichtungen®

WhatsApp
+41 79 515 45 95

4. Installation

Before installation:

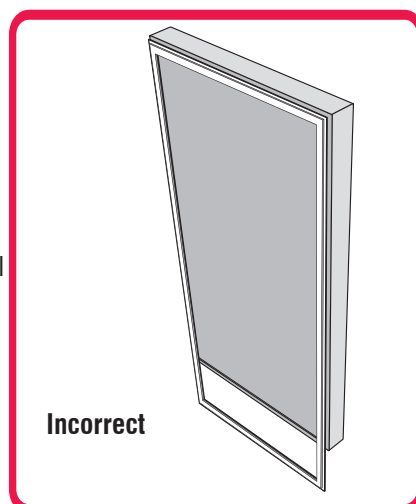

- Take the seal from the box upon receipt.
- Always hold the seal by its corners to keep the magnetic strip from breaking.
- Lay down the seal so it can adapt to its ambient temperature.
- Wrinkles and creases (through transportation) can be removed by gently warming the seal with a hairdryer if necessary.
- Gently remove the old seal from the door or drawer.
- Clean the door/drawer and the cabinet face. Use a clean cloth and Professional fridge seal cleaner.
- Disinfect the door/drawer and equipment surface with an approved disinfectant. Let it sit for 30 seconds and wipe dry with a clean cloth before placing the new seal.

Installation:

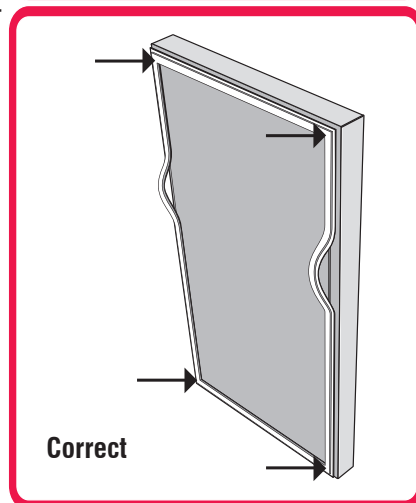

- Place the corners of the seal first followed by the short and long sides, this to keep the seal/gasket from stretching.
- Right after installation magnetic seals can have less power of attraction. It can take several weeks for the magnet to reach the right power of attraction.
- If a corner breaks during installation this can be repaired by using superglue.

Check the following if the seal does not close or seal correctly after installation:

- Check if the correct profile and measurements were ordered.
- Check that the door is not crooked or twisted.
- Does the cabinet face contain a counter magnet?
- Check that the seal/gasket is not wrenched on the hinge side. If this is the case, put the door without hinges against the refrigerator, then re-install the hinges.

Correct

Maintenance

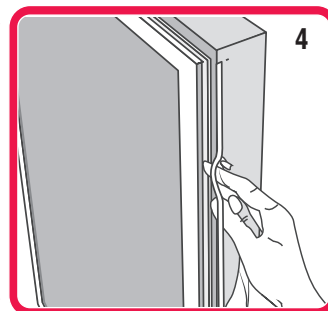

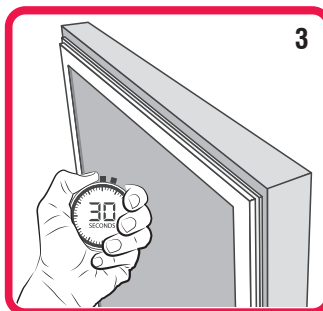

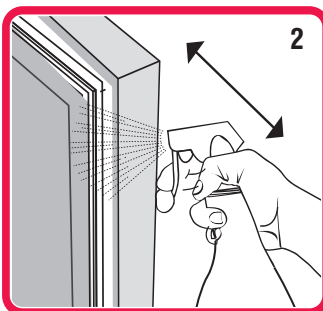

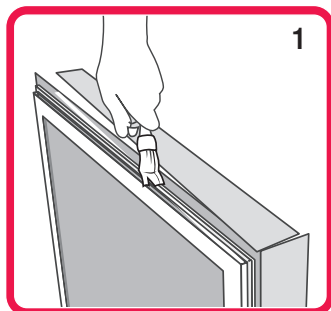

The life span of a door seal will be extended when properly cleaned on a daily basis. With proper cleaning fat and dirt won't get the chance to affect the PVC material. Fat causes PVC to dry out and get brittle which causes it to rip easily. Besides this a clean seal is important for general kitchen hygiene and food safety.

General

- Clean your refrigeration equipment seals daily for a maximum lifespan
- Use a clean soft cloth and Professional fridge seal cleaner or a similar water based cleanser.
- Other than prescribed cleansers can damage the PVC which shortens the lifespan of seals.
- Do not use sharp objects to clean in-between the seals folds, this can cause irreparable damage to the seal.

Cleaning

- 1 Remove any visible dirt like crumbs etc. using a brush.
- 2 Apply Professional fridge seal cleaner on the seal.
- 3 Let it sit for 30 seconds.
- 4 Wipe dry with a clean soft cloth, also between the folds. Repeat treatment until the seal is entirely clean.

Adhesives for special bonding KL

Available from stock

Special adhesive for silicone, transparent

Adheres without primer on many materials
Under humidity crosslinking silicone rubber

KL 10 **Elastosil E41** Silicone
Tube of 90 ml

KL 11 **Elastosil E43** Silicone
Tube of 90 ml

KL 22 **Sikaflex 11 FC** light grey
Cartridge of 300 ml

Adhesive primer, permafix

Especially for surface treatment of difficult materials, extra strong
Can of 0.23 l

KL 70

Double-sided adhesive tape permafix (further widths on request)

KL 80 6 mm wide, roll of 33 m

KL 81 12 mm wide, roll of 33 m

KL 82 **Permafix VST Cleaner** (for mounting adhesive tapes)
KL 83 **Test pen** (for surfaces)

KL 90/91 We also assemble your seals with double-sided adhesive tape

Second adhesive for difficult materials

Glues silicone, TPE, EPDM and other materials
It is recommended to use a primer for this glue

KL 44 **Weicon Quick Glue Set** 10ml/12g

KL 45 **Weicon Quick Glue**, 12g

KL 46 **Weicon CA-Primer** 10ml

PTFE grooved rollers RW 1 - 12

poesia-dichtungen®

Available from stock

For hand laminating fibre-reinforced plastic. The laminate is optimally deaerated thanks to the unique groove geometry.

RW 1

PTFE grooved roller 30x40

from CHF 40.45

Devices and machines GM 1-4

Available ex stock

To facilitate your work, we maintain a tried-and-tested range of devices, machines and tools.

GM 1

Heat sealing machine for TPE profiles

Compl. with replaceable mating profiles and fan as well as gasket stamping die with protractor and measuring tapes for frame and wings.

We produce guide tools for every profile in our own factory.

GM 1V

Leasing:

Free upon acceptance of our

poesia-dichtungen®

Daily/weekly prices on request

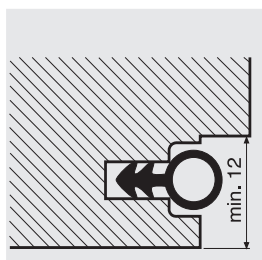

GM 2

Groove cutting machine for sink seals

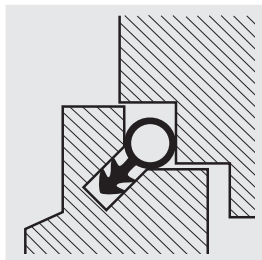

AF-system

(groove straight to clearance and in the corner)

Accessories:

6 mm or 8 mm collet for our seals AF 5 to 11

GM 2V

Leasing:

Free upon acceptance of our

poesia-dichtungen®

Daily/weekly prices on request

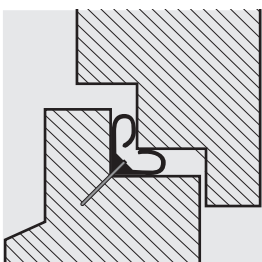

GM 4

Adhesion pistol (compressed air)

for replacement seals AF 1 to 4

with long nose

Accessories:

Adhesion WH 1, WH 2, WH 3 (see page 133)

GM 4V

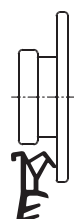

Leasing:

poesia® Ratchet strap protector

Goods transport:
securing and
protecting the goods

Goods of all shapes and sizes are manufactured, packaged and sent from A to B. In order to ensure that the goods are not damaged in transit, they must be secured. But the containers should also survive transport unscathed.

Professional ratchet straps ensure that cardboard boxes, wooden crates and goods shrink-wrapped in plastic are protected, so that the goods arrive at their destination safely and are not damaged by slippage.

But not all containers are robust enough to withstand the pressure of the ratchet strap without being damaged. They can buckle, which could have a negative impact on the goods inside. The transport containers should also be protected from scratches and damage to the surfaces.

Using ratchet strap protectors

The ratchet strap protectors from poesia are placed between the transport container and the strap before the ratchet is tightened and locked. This provides the required protection with minimum effort.

Dimensions and material

Poesia offers the ratchet strap protectors in the following dimensions:

Length: 190 mm; widths: 25, 35 and 50 mm; thicknesses: 6 mm at the thinnest point and 16 mm at the thickest point. Available in blue, red and yellow. The ratchet strap protectors are made of TPE (thermoplastic elastomers).

Simple order process

The ratchet strap protectors are available from stock in pack sizes of 2 or more. When ordering the customer has several options: The usual order form can be filled in by hand and sent by fax or post, or scanned and sent by email.

The order can be placed directly via the interactive PDF form, which is on the poesia website. The order details can easily be entered into the form and then sent directly by email. This saves valuable time spent scanning or faxing.

Orders can of course also be placed via our online shop. We are happy to help you if anything is unclear or you have any questions about the order process.

COMPARISON OF MATERIALS

TPE: Thermoplastic elastomers

The thermoplastic rubber combines the properties of vulcanised rubber with the simple plasticity of thermoplastics. Extrusion systems allow a wide range of profile geometries to be manufactured. They offer an interesting and cost-effective alternative to EPDM and MVQ.

The most important properties are:

- High elasticity, pliability and stability, good resilience
- Exceptional weather resistance, including against ozone and UV
- High heat resistance, above 100 °C
- Very good low temperature flexibility, down to -50 °C
- Good elastic and mechanical properties
- Easy to dye
- Exceptional sealing properties
- Tested acrylic glass compatibility
- Excellent durability
- Good resilience against water, acids and lye
- Aligned to fulfil norms (RAL, DIN, FDA)
- Environmentally friendly and recyclable
- Good lacquer and paint fastness, also with aqueous acrylic dispersions
- In case of fire, there are no corrosive or toxic gases

Applications:

- In the construction sector for doors, windows, façades, conservatories, dilatation joints.
- In traffic and transport sectors.
- In instrument, machine and plant construction.
- In the production of household appliances.
- In the medical and food sectors, etc.

MVQ: Silicone elastomer synthetic rubber with a silicon/hydrocarbon base

An exceptional material for increased demands:

- Very good weather resistance, including against ozone and UV
- High heat resistance, up to 200 °C
- Good pliability in cold down to -60 °C
- Exceptional elasticity and resilience, even under extreme strain.
- Good sealing ability with long-term use
- Very good resistance against corrosive air pollutants
- Good lacquer fastness, also with aqueous acrylic dispersions
- Large range of colour design options
- In case of fire, no corrosive or toxic gases arise
- Silicone profiles can be adjusted to be slow-burning

Applications:

- In construction, transport and automotive
- For household appliances such as fridges, ovens
- In electronics
- In the medical and food sectors

MVQ: Self-extinguishing silicone

A further development for the fire protection classes in accordance with UL 94 V1, UL 94 V0 or DIN 4102 B1 norms, depending on material thickness (Colours black and white can only be adjusted similarly. But other colours can be adjusted precisely). Other advantages as normal MVQ silicone.

Applications:

- For the construction and automotive fire protection classes (less smoke formation since self-extinguishing)

EPDM: Ethylene-propylene synthetic rubber

An exceptional elastomer material with the following main properties:

- Very good weather resistance, ozone and UV
- High heat resistance above 100 °C
- Great cold pliability down to -40 °C
- Good lacquer fastness, also aqueous acrylic dispersions
- Good resistance against air pollutants
- In case of fire, no corrosive or toxic gases arise

Applications:

- In general construction
- For windows, doors and façades
- In automotive, mainly as body seals

PROPERTY COMPARISONS

of seal profile materials

The materials can exhibit significantly different properties depending on their chemical makeup, even within the same material class. These figures refer to the average values.

Properties	PVC all colours	TPE (TPE-V, TPE-S) all colours	EPDM light colours	EPDM black	Silicone VMQ all colours	Silikon self-extinguishing all colours (not white)

* The fire index number is made up of the flammability (first figure) and the level of smoke (second figure) determined in the tests, however it can differ depending on mixture and supplier and is therefore not a binding figure! All comparisons are guidelines. They do not release the user from checking materials for their suitability.

Degree of flammability

3	highly flammable
4	medium flammability
5	low flammability
6	not flammable

Level of smoke

1	strong smoke formation
2	medium smoke formation
3	weak formation of smoke

Key: + + + excellent + + very good + good – moderate – – poor – – – insufficient

PRODUCTION

poesia group: Modern TPE and silicon extrusion

The poesia group uses its modern machinery to produce high-performance profiles out of TPE and silicon. The company works extremely efficiently and reliably and makes its customers' individual requirements a reality.

The sealing profiles, made of materials such as TPE (thermoplastic elastomers), EPDM (ethylene propylene diene monomer rubber) and silicon, are used today in a wide variety of fields. The poesia group supplies customers who use the profiles in construction, industry, vehicle manufacturing, transport, equipment manufacturing and food production. poesia uses multiple extrusion lines to produce the profiles at its factory in Unterkulm, Switzerland. The production processes are basically identical for all the extruders.

TPE profile production

TPE pellets are drawn into a cylinder in the extruder by means of a screw. Next, the pellets are heated and melted by applying shear forces and heating the cylinder to between 180 and 210 °C. The extruder then builds up pressure before pressing the molten mass into the forming tool via an injection head.

The next step is to draw the plastic profile, which is still hot, through a cooling channel. It hardens there, acquiring its rubber-like qualities in the process. In the final stage, the profile undergoes further processing in accordance with the customer's specifications: cross-cutting, labelling, rolling, application of double-sided adhesive tape, etc.

Properties of the TPE profiles

The TPE profiles are versatile and offer a broad range of options for further processing. They can be welded, glued or spliced. TPE allows for small profile cross-sections as narrow as 0.6 mm in a variety of permanent colours when the same tool is used. They also offer many advantages in terms of eco-friendliness. The material is recyclable and the processing is very environmentally friendly as no vulcanisation is required.

Profile production from silicone

poesia produces silicone profiles using a modern, high-performance extrusion line. The elastomers are extruded in basically the same way as with TPE extrusion. The material is fed in and homogenised by means of a screw in the cylinder before pressure is built up. Then the silicone mass is pressed through a forming die. The difference is that the cylinder and screw have to be cooled to the right temperature to prevent vulcanisation. The profile is then cured using heat in a vulcanisation channel. This means that the plastic mass is transformed into a rubber-elastic material. The profiles now exhibit a hardness of 30 to 80 Shore A and can be annealed, if necessary. As such, they comply with FDA specifications, depending on what mix-ture is used. Four hours of post-treatment in an oven set to 200 °C 'rinses away' the breakdown products of vulcanisation. In the last stage of the process, the profile undergoes further processing in accordance with customer specifications. cross-cutting, labelling, rolling, application of double-sided adhesive tape, etc.

From consulting and production to logistics

The customer's CAD plans serve as the point of departure for profile production in most cases. The specialists at poesia review the plans, create quotes and ensure that the process runs smoothly and on schedule. Thanks to exceptionally efficient and flexible production, small quantities are possible starting at 300 meters.

poesia processes mixtures with hardness ratings of approx. 30 to 80 Shore A.

Cross-sections ranging from approx. 20 mm to 800 mm with a maximum width of approx. 120 mm are possible. The limits are determined on a case-by-case basis.

poesia-dichtungen®

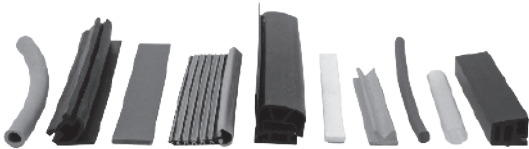

poesia-dichtungen®
From development to hard work.

poesia-dichtungen® are used as:

- Window seals
- Facade seals
- Door seals
- Frame seals
- Renovation seals
- Fire protection seals
- Conservatory seals
- Shower Door and Cubicles seals
- Refrigerator seals
- Floor-Door seals
- Power plant seals
- Vehicle seals
- Gate seals
- Camping and caravan seals

poesia-profile®

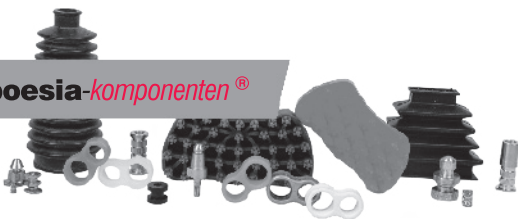

poesia-profile®
Manufacture and use.

poesia-profile® are used as:

- Hoses
- Soundproofing
- Step protection
- Joint profiles
- Ram protection profiles
- Flat seals
- Safety profiles
- Damping profiles
- Edge protection profiles
- Track groove profiles
- Clamping profiles
- Hinge profiles

poesia-komponenten®

The poesia-komponenten®
also in the area of specialties.

poesia-komponenten® are:

- Threaded bushing systems
- Turning and milling parts
- Ready-made frames
- Moldings
- LSR
- Solid silicone
- Design products
- Inflatable seals/InflaSeal®
- Radial and axial shaft seals
- Hydraulic seals
- Pneumatic seals
- O-rings
- Seals for drinking water applications

Further information of our brands can be found at: www.poesia.swiss

TIPS & TRICKS

Useful information

poesia®-
sample service:

The fastest way to get your replacement seals:

- Browse through our catalogue catalogue with 5,000 profiles, and compare your sample with our 1:1 illustrations. You can make a choice there and order or request a selection of samples.
- Take a look at our homepage www.poesia.ch and compare your sample with the 1:1 illustrations.
- Send us an approx. 10 to 20 mm piece of your sample by mail, including length specification, your preferred colours and any additional information. We will send you the matching profile or, in case of doubt, a selection of sample profiles that you can try out.
- Take your sample, make a straight cut and, using an ink pad, a clean stamp that you fax to us. We will then send you our suggestion right away.

Sample

You can always receive 18- to 20-cm-long samples from our range for free. However, you should limit yourself to about five to ten samples to keep our workload to a minimum.

Return shipments

If you do not expect a refund, we accept all returns, which we will dispose of for free. For refunds, we only accept complete, uncut and clean rolls.

Installation

Am Ideally, you should install the profiles with a lubricant. A liquid soft soap or common washing-up liquid are suitable, for example. Apply with a sponge or cloth, only in the groove or on the profile base. Our expander tools can also help you as practical installation aids during installation.

Tips for tradespeople: Measure the clearance

It is difficult to measure the clearance for replacement seals when the window is closed. Here is the simplest method:

Take Plasticine and form one or more small round balls. With the window open, press these into the groove and close the window. You can now measure the crushed Plasticine with a Vernier calliper and depth gauge to determine the exact clearance.

Cutting grooves

You get the best results using our groove cutting machines and original tools. You can buy or rent the machines from us.

Functional check of the seals

After 10 to 15 years, we suggest that you check whether the seals are still functioning properly, particularly on frequently used doors or windows.

Test 1: Is the seal soft and elastic? Is the closing pressure normal?

Test 2: Check the seal tightness with a piece of paper. Windows and doors are considered airtight if you cannot pull a piece of paper through them.

Test 3: Maintenance products for seals must not contain any greasy or oily ingredients. These cause more harm than good. We suggest that you check seals every five years. Hinges and locks can be maintained at the same time.

Opportunity for tradespeople

Good service and regular maintenance gives tradespeople the opportunity to maintain regular contact with their customers and get follow-up orders.

Take advantage of poesia's® advice and services

- Free telephone consultation during business hours
- Is your seal no longer in stock? Send us a sample, and we'll look for your seal on the market or make it ourselves.
- Our specialists are available to give you advice. We would be glad to advise you.

Free sample delivery

We can send you 10- or 20-cm-long samples for free. From 1 m, you can obtain your profile from us for a small non-recurring cutting fee of CHF 15 per profile cross-section. No cutting fee is charged for lengths of more than 25 metres.

Webshop and poesia-APP

Order your gaskets conveniently and around the clock in our webshop. You will find all new products and the latest gaskets from the poesia® range here.

Load our app for smartphones from the App Store or Google Play. There, you can choose, order, inquire, or photograph the desired seal, and send this to us via the app. With the efficient navigation, you will find your seals here faster and easier.

Shipment:

Small quantities of up to approx. 15 boxes can be sent by mail, with larger orders by lorry.

Delivery periods:

Mail delivery usually takes 24 – 48 hours.

Lorry delivery usually takes two to three days.

Custom-made seals:

New tool with first sample: 2 – 3 weeks;

serial production after approval: 2 – 3 weeks

GTC:

at www.poesia.ch

Properly cleaning seals

Not only do faulty door, window, shower and fridge seals look unsightly, they no longer do their job properly. Seals which no longer seal result in increased costs which are preventable.

seal is hard or brittle, it means it has exceeded its useful life. This condition can be determined by doing a quick check. They should be replaced without too much delay, as a defective seal is also difficult to clean properly.

Checking the seals at regular intervals, or according to the level of use, is a preventative measure. If the seals are still in good condition, they can be cleaned and cared for in a few simple steps, keeping them elastic and soft. This extends their useful life – and can also save money.

A rubber seal is easy and straightforward to clean with some lukewarm water and detergent. This removes 90% of germs, fat and dirt from the surface. The next step involves using disinfectant. The surface should then be dried to prevent the formation of mould.

Regular cleaning and removing contaminants from seals removes the food source that provides a breeding ground for bacteria and fungi. Cleaning also helps to prevent discolouration of the rubber.

Those who prefer to use natural cleaning agents can opt for white vinegar (300 ml) and water (700 ml). Submerge the cloth in the mixture and use it to wipe the seal until all stains have disappeared.

Sodium bicarbonate has also been proven to act as a cleaning agent thanks to its disinfectant properties. To do this, mix some bicarbonate of soda with water until a white paste is formed. This mixture is applied using an old toothbrush and massaging the dirty areas. Finally, the seal is rinsed with water and rubbed dry using a clean cloth.

The seal can then also be rubbed with a little baby powder for a perfect finish. This secret tip helps to extend the life of the seal for even longer.

And don't forget:

Aggressive cleaning agents or vinegar cleaners should not be used as they can damage the material.

The best forms of ventilation

Preventing damages caused by moisture in residential properties

An overview of the key points

There is moisture in occupied residential properties. It is caused by the people who live there and by the environment. Too much moisture can result in damages:

- Condensation
- Mold

Prevent these damages by ventilating the property on a regular basis:

- Manually by opening the windows
- By means of decentralized (room by room) ventilation
- With window or wall fans
- By means of centralized ventilation systems

We will provide you with tips on how to properly ventilate and avoid high levels of moisture in your home.

Moisture causes damages

In the wintertime, the windows often fog up at the bottom and small droplets of water form along the edge of the frame. Residents complain of mold, wallpaper starts to peel away in places or ugly stains can be seen on the wall. These are damages caused by the moisture in the air in the room. Many of these are also of concern from a hygienic point of view, therefore their causes must be eliminated.

Cause 1: moisture in the air

Cause 2: cold surfaces

Problem areas

The lower section of the window can cool down significantly in rooms with floor-to-ceiling windows. If the heating coils in a heated floor heating system are too far away from the front of air will not reach the window because it cools down before it gets there. There are furniture or plants in front of the window or wall, which interrupt the flow of hot air.

Ways to avoid condensation

Condensation can form even at normal levels of humidity. This can be avoided:

- By removing the excess moisture
- Keeping the surfaces at a temperature above the dew point of the air in the room.

Ventilate regularly and properly

Having the right kind of ventilation helps to prevent high levels of humidity, components cooling down significantly and high levels of energy loss.

Ventilating properly means:

Opening the windows fully for 6 to 10 minutes (shock ventilation) and closing the radiator valves at the same time. A quick cross ventilation (draught) is particularly effective. This removes a lot of moisture from the room in a short space of time, but the surfaces of walls and ceilings do not cool down. As a result, you save on heating energy.

When should you ventilate your home?

You should ventilate rooms in your home several times a day, ideally in the morning, at midday and in the evening. If you are not home during the day, you can air the rooms every morning and evening. Ventilate after showering, bathing or cooking and remove the steam in the kitchen by using the extractor hood above the cooker.

Please bear the following in mind

The climate is influenced by several variables, including:

- Temperature of the air
- Temperature of the surfaces
- Humidity
- Speed of the air (airflow)
- Activities of the people in the room

If you ensure that the indoor climate of your home is a pleasant one, then you are simultaneously promoting your own sense of well-being and preventing unpleasant and unwanted effects, because mold grows predominantly in damp, inadequately or overly heated and unventilated rooms.

Room temperature between 18 and 22°C

Try to keep the temperature in your living and sleeping areas at around 20°C. When the air is too warm, condensation may form.

Doors closed and keeping the right distance

The doors between cooler bedrooms and the other, warmer rooms should remain closed.

Keep humidity under 50% in the winter months

The relative humidity should not exceed the values listed in the table below. It can be measured with a hygrometer. The higher the temperature, the drier the air will be in the room. Only humidity the air in the room if the level of humidity in the room is below 30% relative humidity. It is not advisable to go above a relative humidity of 40% on cold winter days, as this favors the growth of micro-organisms such as mites.

Use of cleaning agents on TPE profiles

Regarding the use of suitable cleaning agents for cleaning profiles made from our TPE materials, we can recommend the following:

In principle, our materials are resistant to common household cleaning agents. The concentration of the cleaning agent used and prolonged exposure of the material to the cleaning agent play a key role here.

- **Use of acidic cleaning agents**

Acidic cleaning agents (e.g. cleaners based on acetic and citric acids) may, if left on the material for a longer period of time, dissolve the filler from the compound while also causing the material to swell up.

- **Use of alkaline lyes and surfactants**

We are not aware of any effects resulting from the use of these types of cleaning agent. This means that our material is resistant, provided that the cleaning agent is used in conventional concentrations and left to take effect for the specified amount of time.

- **Use of non-alkaline surfactants**

There are also no known adverse effects relating to the use of these.

- **Use of alcohol-based cleaning agents**

Normally such cleaning agents will evaporate very quickly, meaning that there is no reaction with the TPE. However, leaving it on the material for longer may cause to migrate out of the TPE, potentially causing the material to become brittle.

- **Use of solvents**

We strongly advise against using solvents! Solvents can destroy the TPE material if left on the material for a longer time.

The use of cleaning agents such as bleaching agents (e.g. chlorine bleach) may cause discoloration of the material.

Ordering replacement seals: Now also available via the WhatsApp service

At our new factory in Unterkulm, we produce new seals and profiles every day for a wide range of applications. The warehouse holds around 5,000 different versions. We support our customers needing to replace old seals and profiles with our popular sample service.

The **poesia®** sample service is highly valued by our customers and has been available for many years. When doors, windows, showers or fridges need new seals, it is often not clear precisely which type is required. To make sure that the correct order is placed, the Poesia specialists can help the joiner or service technician find the right seal.

To do this, you as the customer can remove old or faulty seals and send them to us in the post. Our specialists then search for the right replacement seal or alternative. There is a good chance of finding the right seal, as we have an enormous range of several thousand seal types.

If we find the right replacement seal, you will receive one or more samples of the seal sent to your home free of charge within 24 hours for test purposes. This is for your own peace of mind before the order is placed. This type of customer service has been tried and tested over many years and offers many advantages to you, the customer.

In addition to the usual communication channels (telephone, app, webshop, website or fax), during the course of digitalization, we recently launched a new option for customers to get in contact with our seal specialists even faster than before: **by WhatsApp.**

Thanks to this new channel of communication, the seals can be checked more quickly and supplies gets to the customer faster.

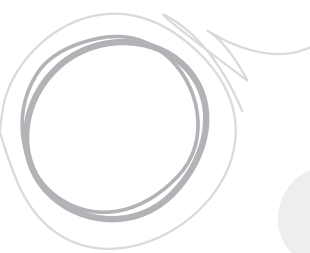

Those wanting to use WhatsApp should photograph the seal needing replacement using their smartphone and send the image with a short message and the delivery address to the **mobile number +41 79 515 45 95.**

We will then search for the required replacement seal or an alternative and send one or more free samples by post to the enquirer for checking. If the sample sent is the right one, we will be happy to supply the required number of metres by post.
